4.b) Advanced Data Modelling and Form Design

Aim

To extend the Insurance Claim Request & Processing Management System in Zoho Creator by implementing advanced field types and features such as lookup fields, image and file uploads, numeric validation, subforms, URL fields, rich text fields, digital signatures, and system-generated values for efficient insurance claim management

Theory

1. Advanced data modelling in Zoho Creator involves using specialized field types and advanced form components to collect, manage, and validate detailed information.
2. In this experiment, the Insurance Claim Request & Processing Management System is extended with advanced fields and features, including lookup fields, image uploads, file uploads, numeric fields, subforms, URL fields, rich text fields, digital signatures, and system-generated values.
3. The advanced form design contains the following sections:
    - Section E – Claimant Identity and Verification
    - Section F – Policy and Incident Details
    - Section G – Investigation and Claim Processing
    - Section H – Declaration and System-Generated Values

Section E – Claimant Identity and Verification

- Claimant Record Lookup – Lookup field
- Claimant Photograph – Image field
- Identity Proof Document – File Upload field
- Previous Claim Count – Number field

Section F – Policy and Incident Details

- Policy Record Lookup – Lookup field, if a separate policy form exists
- Incident Evidence – Image or File Upload field
- Incident Report URL – URL field
- Supporting Documents – File Upload field

Section G – Investigation and Claim Processing

- Claim Record Lookup – Lookup field
- Surveyor Assignment – Lookup field, if a separate surveyor form exists
- Investigation Details – Subform field for recording investigation activities
- Claim Amount Requested – Number or Currency field
- Investigation Date – Date field
- Investigation Completed – Decision Box or Checkbox

Section H – Declaration and System-Generated Values

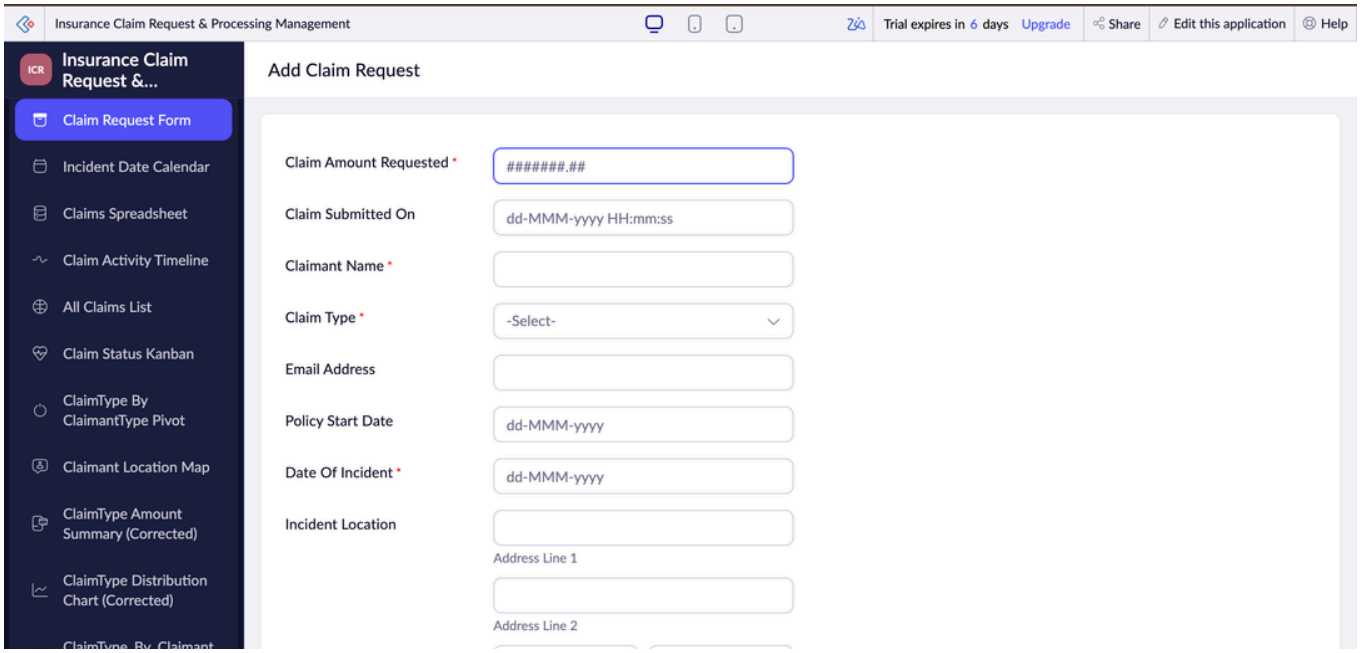

- Claim Processing Guidelines – Rich Text field
- Claimant Consent Signature – Signature field, if available and required
- Claim Created On – Date-Time field, if configured
- Claim Reference ID – Auto Number field, if configured

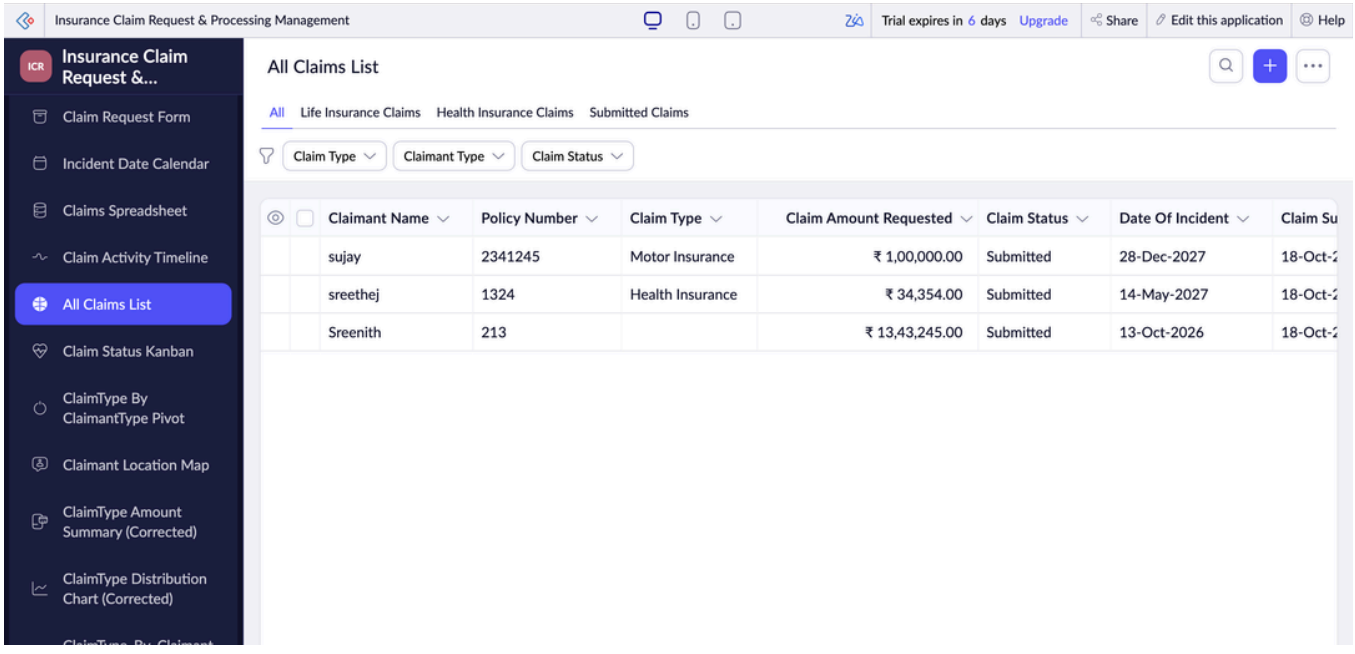

Note: These are proposed advanced fields for the experiment. They are not necessarily part of your current application, so add them only if required by your assignment. The original experiment similarly describes these features as proposed extensions.

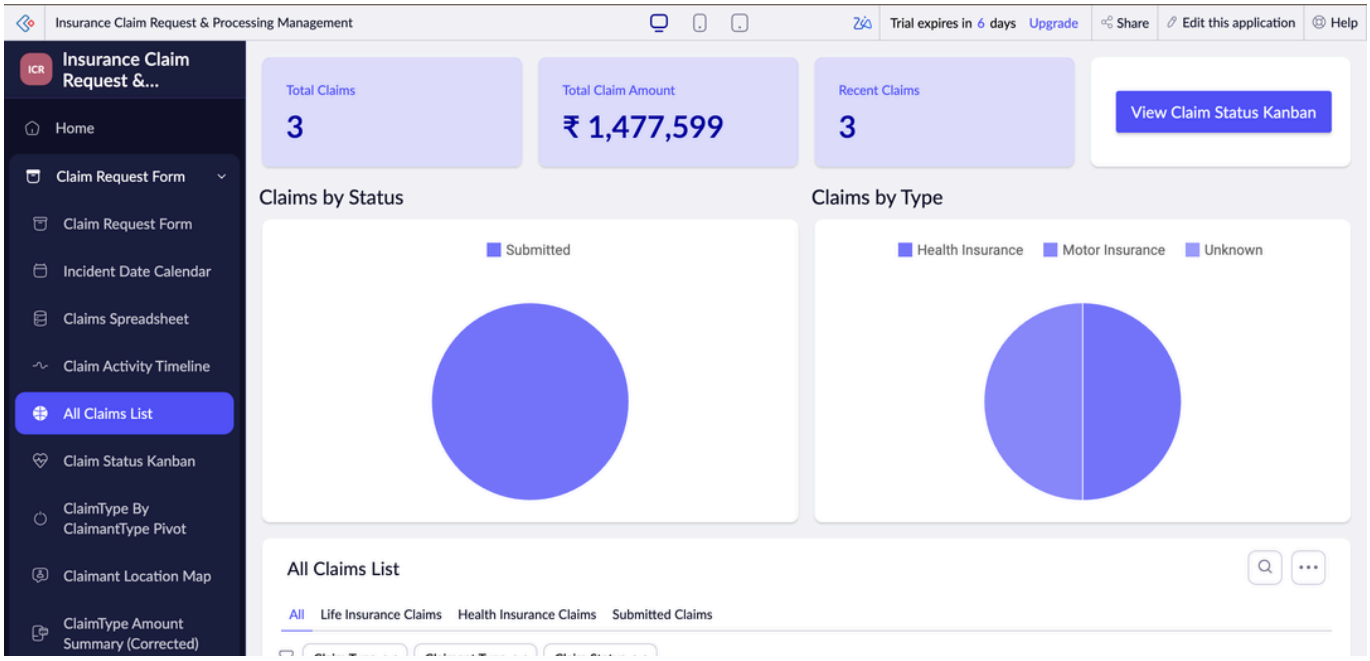

Procedure

1. Open the existing Insurance Claim Request & Processing Management application in Zoho Creator.
2. Open the Claim Request Form to configure advanced claimant and claim information fields.
3. Add a Claimant Photograph field using the Image field type, if required.
4. Add an Identity Proof Document field using the File Upload field type.
5. Add a Previous Claim Count field using the Number field type.
6. Add supporting document and incident evidence upload fields.
7. Configure a Policy Record Lookup field if a separate policy form exists.
8. Add an Incident Report URL field using the URL field type.
9. Create an Investigation Details subform with fields such as Investigation Date, Surveyor Name, Findings, and Investigation Status, if required.
10. Configure Claim Amount Requested using an appropriate numeric or currency field and apply validation rules.
11. Configure the Investigation Date and Investigation Completed fields.
12. Add a rich text field to display claim-processing guidelines and instructions.
13. Configure a claimant consent signature field if supported and required.
14. Configure system-generated date-time and claim reference number fields, where available.
15. Set appropriate field properties, mandatory fields, and validation rules.
16. Save and preview the modified forms.
17. Enter fictional sample data and test the advanced fields.
18. Submit sample claims and verify that the information appears correctly in the corresponding reports.

Result

The Insurance Claim Request & Processing Management System was extended conceptually with advanced data modelling features, including lookup fields, image and file uploads, numeric fields, subforms, URL fields, rich text content, and system-generated values. These features support more structured claimant information, incident documentation, investigation tracking, and insurance claim processing in Zoho Creator.
