5. Blood Donor & Camp Management – Zoho Creator Reports Suite

Aim

To design and configure a suite of reports in Zoho Creator for the Insurance Claim Request & Processing Management application, demonstrating different report types to organize, monitor, and analyze insurance claims, investigations, approvals, and settlements.

Reports Used Overview

Report Type	Report Name
List View	All_Claims_List
Spreadsheet View	Claims_Spreadsheet
Spreadsheet View	Claim_Status_Kanban
Spreadsheet View	Incident_Date_Calendar
Spreadsheet View	ClaimType_Distribution_Chart
Spreadsheet View	ClaimType_Amount_Summary
Spreadsheet View	ClaimType_By_ClaimantType_Pivot
Spreadsheet View	Claimant_Location_Map
Spreadsheet View	Claim_Activity_Timeline

Detailed Report Descriptions

1. All_Claims_List (List View)

- Purpose: Displays registered insurance claims in a structured table for easy record management.
- Features: Shows claimant name, policy number, claim type, requested amount, and claim status. Records can be searched, sorted, and filtered where supported.

2. Claims_Spreadsheet (Spreadsheet View)

- Purpose: Provides a grid-based view for monitoring and updating claim-processing information.
- Features: Displays claim details, investigation status, assigned surveyor, and settlement status. Authorized users can update permitted fields.

3. Claim_Status_Kanban (Kanban View)

- Purpose: Visually organizes claims according to their processing status.

- Features: Groups claims into categories such as Submitted, Under Investigation, Approved, Settled, and Rejected. Drag-and-drop status changes should only be described if enabled and tested.

4. Incident_Date_Calendar (Calendar View)
   - Purpose: Displays insurance incidents on a calendar for easier monitoring.
   - Features: Uses the Date of Incident field to organize claims by incident date and allows users to review associated records where supported.
5. ClaimType_Distribution_Chart (Chart View)
   - Purpose: Visually represents the distribution of insurance claims by type.
   - Features: Uses a Pie Chart to compare the number of claims across claim types, helping identify frequently reported claim categories.
6. ClaimType_Amount_Summary (Summary View)
   - Purpose: Provides a concise overview of requested claim amounts.
   - Features: Groups claims by Claim Type and summarizes the number of claims, total requested amount, and average requested amount.
7. ClaimType_By_ClaimantType_Pivot (Pivot Table)
   - Purpose: Analyzes the distribution of claim types across claimant types.
   - Features: Displays Claim Type as rows, Claimant Type as columns, and the count of claims as values.
8. Claimant_Location_Map (Map View)
   - Purpose: Displays claimants geographically to help visualize the locations associated with insurance claims.
   - Features: Uses available address fields to display claim locations where map support and geocoding are configured.
9. Claim_Activity_Timeline (Timeline View)
   - Purpose: Organizes claims chronologically to help monitor claim submissions over time.
   - Features: Uses Claim Submitted On to display claim activity and trends over time, where supported by the report configuration.

Procedure

1. Open the Insurance Claim Request & Processing Management application in Zoho Creator.
2. Navigate to the reports associated with the Claim Request Form.
3. Configure the All Claims List report with the relevant claimant, policy, amount, and status fields.
4. Configure the Claims Spreadsheet report for reviewing and updating permitted claim-processing fields.
5. Group claims by Claim Status in the Kanban report.
6. Configure the Calendar report using the Date of Incident field.
7. Create the Chart report to display the distribution of claims by Claim Type.
8. Configure the Summary View to calculate claim counts, total requested amounts, and average requested amounts.

.

9. Configure the Pivot Table using Claim Type, Claimant Type, and claim counts.
10. Configure the Map View using available claimant address fields.
11. Configure the Timeline report using Claim Submitted On.
12. Open the reports in Live mode and verify that the displayed records, groupings, and calculations are correct.

Result

The Insurance Claim Request & Processing Management application was configured with a suite of reports to organize and analyze insurance claims. The reports support claim tracking, investigation monitoring, geographical visualization, chronological analysis, and financial summaries.

Note: According to your latest audit, six of the nine reports passed verification, while the Pivot Table and Chart require manual configuration. Permissions and refresh settings also require verification. Therefore, describe all nine reports as successfully configured in your practical record only after completing and testing the remaining requirements.
