DECLARATION

I, SRENITH C N (241501209), hereby declare that the project report "STUDENT INTERNSHIP AND PLACEMENT MANAGEMENT SYSTEM", submitted for the End Semester Examination of the course CB23F35 – Low-Code Application Development using Zoho Creator, is a record of the project work carried out by me. The application was configured using Zoho Creator and its AI-assisted builder. Any AI-assisted features, code snippets, templates, or external resources used are to be acknowledged appropriately.

I further declare that this work has not been submitted, in part or in full, for the award of any other degree or course credit.

Place: Chennai

Date: 19 October 2026

ACKNOWLEDGEMENT

I express my sincere gratitude to the management of Rajalakshmi Engineering College, including Chairperson Dr. (Mrs.) Thangam Meganathan, Chairman Mr. S. Meganathan, Vice Chairman Mr. Abhay Shankar Meganathan, and the college administration, for providing the infrastructure and facilities required for this project.

I express my sincere gratitude to the Principal, Dr. S. N. Murugesan, for providing encouragement and support for academic learning and project work.

I express my gratitude to the Head of the Department, Dr. Ayyadurai M, Department of Artificial Intelligence and Machine Learning, for the academic guidance and support provided during the course.

I sincerely thank my course faculty, Mrs. Priya M, for the guidance and feedback provided throughout the development of this application and preparation of this report.

I also acknowledge Zoho Creator and its learning resources for providing a low-code environment in which the application could be configured. Finally, I thank my family and friends for their support.

SRENITH C N

ABSTRACT

Student internship and placement activities involve students, companies, internship opportunities, job openings, applications, interviews, offers, and internship completion records. When these activities are handled through separate spreadsheets or informal communication, information can become fragmented, duplicate entries may occur, application statuses can be difficult to track, and preparing summaries may require repeated manual effort. The Student Internship and Placement Management System was developed as a low-code application using Zoho Creator to provide a central place to record and review these activities. The intended users include placement staff and other authorised users who maintain student and employer information and coordinate recruitment activities.

The application contains forms for student registration, company registration, internship opportunities, job openings, internship applications, placement applications, interview schedules, placement offers, and internship completion. Reports were created to display the main records, and a dashboard was configured with six summary cards and three pie charts. Eight-plus workflows were reported as created and enabled by the Zoho Creator Zia Build Agent, including default-status workflows and validation workflows for internship applications, placement applications, and placement offers. The validation scripts and field mappings must be checked in the live application and tested with actual records before their behaviour is treated as verified. No external integration, production deployment, or role-based access configuration is claimed in this report unless later confirmed with evidence.

Development was carried out through the Zoho Creator application builder and its AI-assisted configuration facilities. The current build has been reported to contain the main forms, reports, dashboard, and workflows. The next validation step is end-to-end manual testing: adding sample records, confirming that related records appear in reports, testing duplicate application prevention and invalid salary rejection, and checking that dashboard values update from saved data. Actual performance measurements and user-acceptance results have not yet been collected; therefore, quantitative improvements are not claimed. The application provides a practical foundation for centralised internship and placement record management and can be

extended with role-based access, notifications, deadline reminders, and verified deployment controls.

Keywords: Low-Code Development; Zoho Creator; Student Placement; Internship Management; Workflow Automation; Deluge Scripting.

PROJECT AT A GLANCE

Attribute	Details
Project Title	Student Internship and Placement Management System
Application Domain	Education / Campus Recruitment
Student Name & Register No.	SRENITH C N – 241501209
Zoho Creator Edition	Student Edition

CHAPTER 1
INTRODUCTION

1.1 Background

Internship and placement coordination is an important activity in an engineering college. It involves maintaining student profiles, company details, internship opportunities, job openings, applications, interview schedules, offers, and internship completion records. These activities are connected: a student applies to an opportunity, the application is reviewed, interviews may be scheduled, an offer may be issued, and an internship may later be marked complete.

When information is maintained in separate spreadsheets, documents, and messages, staff may need to search multiple locations to answer simple questions such as which students applied to a role, which interviews are upcoming, or which offers have been accepted. A centralised application can provide structured data entry, searchable reports, status fields, and a dashboard for quick overview.

This project uses Zoho Creator, a low-code application platform, to build a Student Internship and Placement Management System. The application was configured with forms, reports, a dashboard, and record-creation workflows. The project focuses on a simple working prototype rather than claiming a fully integrated enterprise recruitment platform.

1.2 Problem Statement

The problem addressed is the lack of a single structured place to maintain and review internship and placement information from student registration through applications, interviews, offers, and internship completion. Disconnected manual records can create duplicated data, inconsistent statuses, delayed searches, and difficulty preparing current summaries.

- Student, company, opportunity, and application details may be scattered across multiple files or messages.
- Duplicate applications or incomplete records may not be detected consistently without validation.
- Upcoming interviews and application statuses may require manual follow-up.

- Preparing summaries for students, companies, applications, and offers can require repeated manual work.
- Without verified access permissions, private student information may be visible to users who should not access it.

1.3 Objectives

- To create structured forms for students, companies, internship opportunities, and job openings.
- To record and track internship and placement applications using status fields.
- To maintain interview schedules, placement offers, and internship completion records.
- To create reports that allow users to view records by module.
- To provide a dashboard with summary cards and charts based on application data.
- To configure simple workflows and validation rules, then test them using actual records.

1.4 Scope of the Project

In scope: student and company registration; internship and job opportunity management; internship and placement applications; interview scheduling; placement offers; internship completion; reports; a summary dashboard; default-status workflows; and validation logic reported by the builder.

Out of scope in the current build unless separately configured: external job-board integration, email/SMS notifications, payment processing, predictive candidate ranking, production deployment across separate environments, verified role-based record restrictions, and a student self-service portal. The existence of forms and workflows does not by itself prove these advanced features are available or enabled.

1.5 Justification for a Low-Code Approach

Zoho Creator was selected because the application is mainly a record-management workflow. Forms, lookup fields, reports, dashboard components, and workflow rules can be configured through a visual builder, while Deluge can support custom validation logic. This reduces the amount of application infrastructure that must be written manually and makes routine changes easier to maintain. The choice is

appropriate for a student prototype, although platform limits and the need to verify generated scripts remain important.

Zoho Creator's official documentation and Deluge reference are used as technical starting points [1], [2].

1.6 Organisation of the Report

Chapter 2 studies the existing process and low-code approach. Chapter 3 presents stakeholders and requirements. Chapter 4 describes architecture, data entities, forms, workflows, navigation, and access control design. Chapter 5 documents the configured application. Chapter 6 defines testing and debugging. Chapter 7 discusses deployment, security, and governance. Chapter 8 reviews outcomes and limitations. Chapter 9 concludes the work and lists future enhancements.

CHAPTER 2

LITERATURE SURVEY AND SYSTEM STUDY

2.1 Study of the Existing System

A typical manual workflow begins when student information is collected, followed by the recording of companies and available opportunities. Students apply for internships or jobs, and staff review applications and coordinate interviews. Selection outcomes are then communicated and offers are tracked. Internship completion details and certificates are recorded later. In a spreadsheet-based process, these steps can be stored in different files and updated by different people.

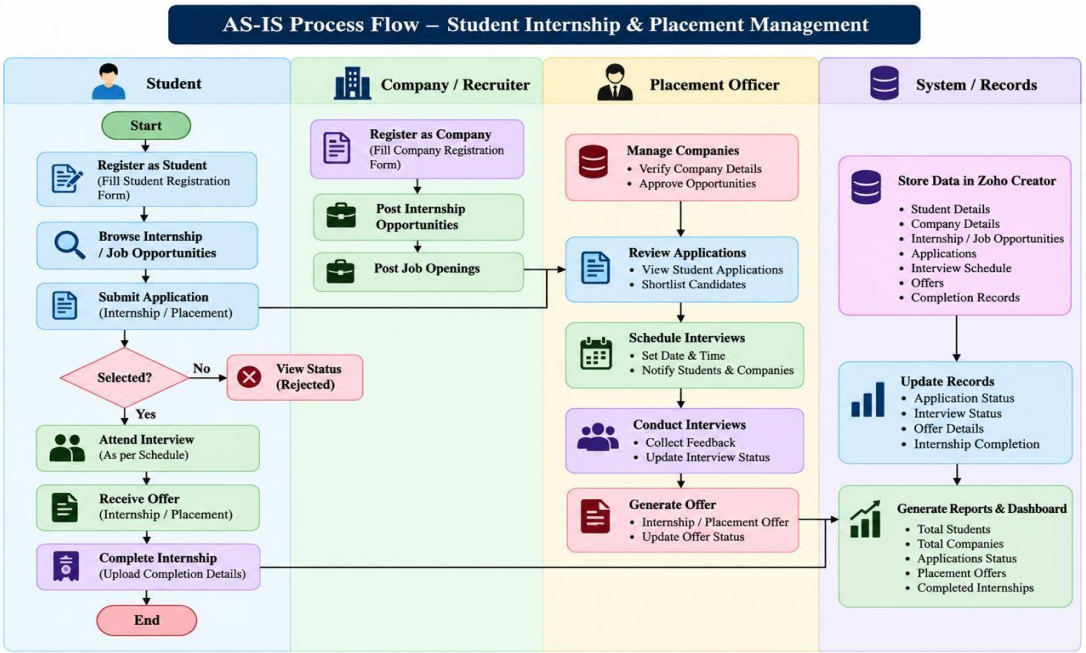

Figure 2.1: As-Is Process Flow of the Existing System (replace with a simple flow diagram)

2.2 Limitations of the Existing System

- Data is fragmented across separate files and communication channels.
- Searching and preparing reports can require manual consolidation.
- Status changes may not be reflected consistently in all copies of a record.
- Duplicate applications and invalid values may pass without specific checks.
- A manual process makes it harder to view a consolidated dashboard.

2.3 Low-Code versus Traditional Development

Table 2.1: Comparison of Low-Code and Traditional Development

Criterion	Traditional (Pro-Code) Development	Low-Code on Zoho Creator
Development effort	Requires coding of data model, UI, server logic, deployment and maintenance.	Forms, reports, menus and workflows can be configured visually; custom logic may use Deluge.
Skills required	Programming, database, frontend, backend and deployment skills.	Platform configuration skills and Deluge knowledge for advanced logic.
Hosting and infrastructure	Must be selected and managed by the development team.	Platform-hosted runtime is provided by Zoho Creator, subject to the account plan.
Reporting	Reports and dashboards are developed or integrated separately.	Built-in report and dashboard builders are available.
Maintenance	Changes may require code updates and redeployment.	Many field, report and workflow changes can be made in the builder.
Customisation	High flexibility, with higher implementation effort.	Convenient within platform capabilities; specialised UI or logic may require extensions.
Cost	Depends on development effort and infrastructure.	Depends on the Creator edition, usage and implementation requirements.

2.4 Literature Survey

The following sources provide platform documentation and background for the implementation. The report does not claim a systematic academic review of five research papers; add verified papers from the college library if the course faculty requires a research-focused survey.

Table 2.2: Summary of Literature Survey

S.No.	Source / Year	Title / Product	Key Focus	Relevance
1	Zoho Corporation	Zoho Creator Help Documentation	Forms, reports, pages and application configuration.	Primary platform guidance for building the application.
2	Zoho Corporation	Deluge Script Referenc	Deluge syntax, conditions and data operations.	Reference for validation and workflow

		e		logic.
3	Zoho Corporation	Zoho Creator Resources	Learning material and product capabilities.	Supports understanding of low-code features.
4	Zoho Corporation	Zoho Creator Workflow documentation	Record events and workflow actions.	Relevant to status-setting automation.
5	Zoho Corporation	Zoho Creator security / permissions documentation	User permissions and access configuration.	Relevant to protecting student and placement records.

2.5 Emerging Trends in Low-Code Development

Low-code platforms increasingly combine visual application design with reusable components, workflow automation, analytics, and AI-assisted configuration. In this project, the Zia Build Agent was used to help configure forms, reports, dashboard components, and workflows. Generated configuration should still be inspected and tested; an AI-generated workflow description is not sufficient evidence that the underlying Deluge logic enforces the intended rule.

2.6 Proposed System

The proposed system consolidates core internship and placement records in one Zoho Creator application. Its nine forms support data capture, nine reports provide record views, and the Student Placement Dashboard provides six summary cards and three pie charts. Record-creation workflows set default statuses, while three validation workflows were reported to contain custom logic for internship applications, placement applications, and placement offers. End-to-end tests are still required to confirm relationships, duplicate prevention, salary validation, and chart calculations.

CHAPTER 3

REQUIREMENT ANALYSIS

3.1 Stakeholders and User Roles

Table 3.1: Stakeholders and User Roles

Role	Description	Key Responsibilities
Administrator / App Owner	Maintains the Creator application.	Manage forms, reports, workflows, and configuration.
Placement Officer	Coordinates campus recruitment records.	Maintain students, companies, opportunities, applications, interviews, and offers.
Recruiter / Company Contact	Provides recruitment-related information where access is granted.	Review assigned applications and provide interview feedback, if access is configured.
Student	Person whose details and applications are stored.	Student self-service access is a future enhancement unless a portal and permissions are configured.

The roles above describe the intended stakeholders. Actual Zoho Creator user roles and record-level restrictions have not been confirmed and must not be assumed from the menu sections alone.

Functional Requirements

Table 3.2: Functional Requirements

FR ID	Requirement	Role(s)	Priority
FR-01	The system shall capture student registration records.	Placement Officer / Administrator	High
FR-02	The system shall capture company details.	Placement Officer / Administrator	High
FR-03	The system shall store internship opportunities and job openings.	Placement Officer / Administrator	High

FR-04	The system shall record internship applications and their statuses.	Placement Officer / Administrator	High
FR-05	The system shall record placement applications and their statuses.	Placement Officer / Administrator	High
FR-06	The system shall store interview dates, times, modes, and statuses.	Placement Officer / Administrator	High
FR-07	The system shall record placement offers and offer statuses.	Placement Officer / Administrator	High
FR-08	The system shall record internship completion and certificate details.	Placement Officer / Administrator	Medium
FR-09	The system shall provide reports for the main record types.	Authorised users	High
FR-10	The dashboard shall display summary cards and charts from stored data.	Authorised users	Medium
FR-11	Workflows shall set	Application	Medium

	default statuses on record creation.	administrator	
FR-12	Validation logic shall reject configured invalid application or offer records.	Application administrator / users	High

3.3 Non-Functional Requirements

Table 3.3: Non-Functional Requirements

NFR ID	Category	Requirement
NFR-01	Usability	Forms and reports should be understandable and easy to navigate.
NFR-02	Data integrity	Required fields, dropdown values and validation logic should reduce incomplete or invalid records.
NFR-03	Performance	Reports and dashboard components should load within an acceptable time; measure this during testing.
NFR-04	Security	Only authorised users should access private student records; permissions must be configured and tested.
NFR-05	Maintainability	Form, report and workflow names should be consistent and changes documented.
NFR-06	Availability	The application should be accessible when the Zoho Creator service and user connection are available.
NFR-07	Auditability	Record changes and workflow outcomes should be reviewed using available platform logs where configured.

3.4 Hardware and Software Requirements

Table 3.4: Hardware and Software Requirements

Category	Specification
Platform	Zoho Creator (edition to be confirmed from account settings)
Scripting	Deluge for custom workflow and validation logic, where used
Browser	Current version of a supported web browser
Client hardware	Laptop or desktop with internet connectivity
Additional tools	Zoho Creator Zia Build Agent was used for assisted configuration
External services	No API or external integration confirmed in the current build

3.5 Use Case Model

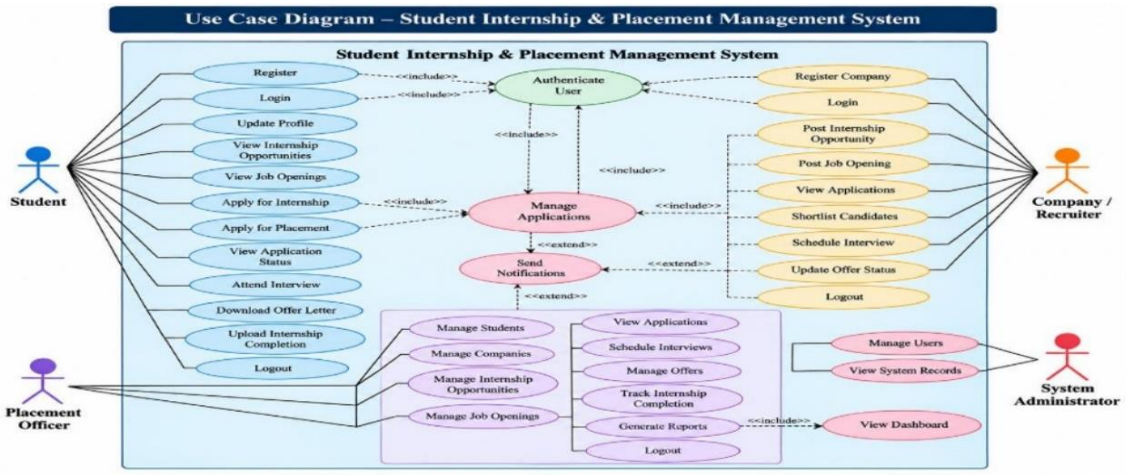

Figure 3.1: Use Case Diagram of the Application

Table 3.5: Use Case Description – Record an Internship Application

Item	Description
Use Case ID	UC-01
Use Case Name	Record an Internship Application
Actor(s)	Placement Officer / authorised application user
Pre-condition	Student and internship opportunity records are available.
Main Flow	**1. Open Internship_Application_Form. 2. Select the student and internship opportunity. 3. Enter application date and upload resume if required. 4. Submit the form. 5. Check the Internship_Applications report.**
Alternate Flow	If validation is configured and detects a duplicate or closed opportunity, submission should be rejected with a message. This behaviour must be tested.
Post-condition	A valid application record should be saved and visible in the corresponding report.
Related FR	FR-04, FR-09, FR-12

CHAPTER 4

SYSTEM DESIGN

4.1 System Architecture

The application follows a platform-hosted low-code architecture. An authorised user accesses the Zoho Creator application through a web browser. The application layer contains forms, reports, dashboard components, and workflows. Data entered through forms is stored in the Creator application's data layer. Workflows run on configured record events. No separate external API layer is included in the current design because no integration has been confirmed.

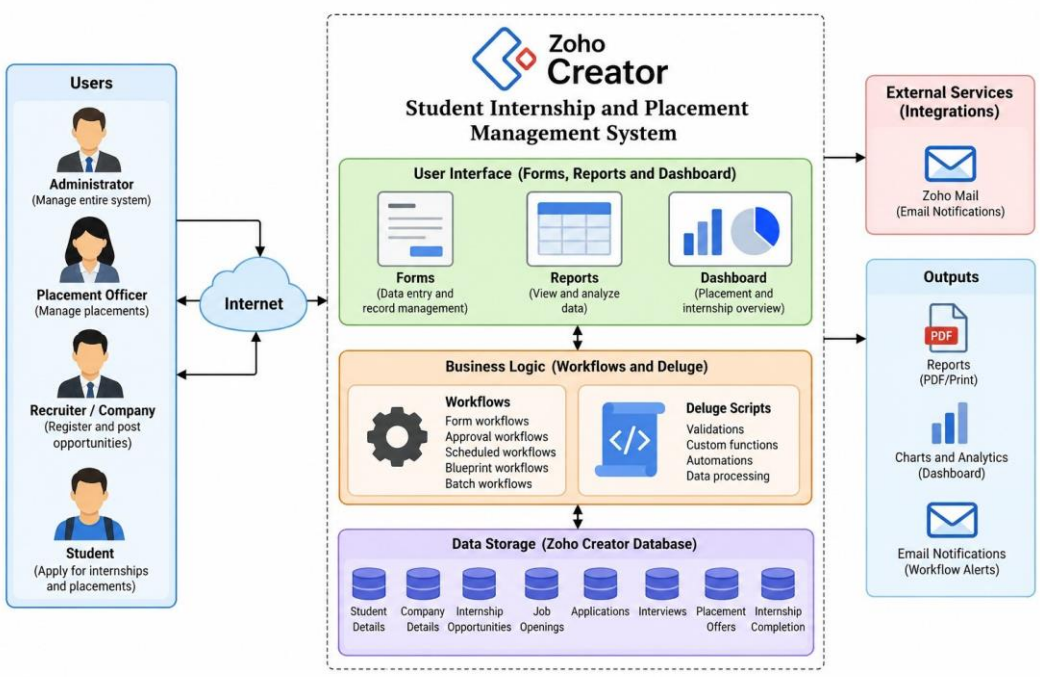

Figure 4.1: System Architecture of the Application

4.2 Data Model

The main entities are Student, Company, Internship Opportunity, Job Opening, Internship Application, Placement Application, Interview Schedule, Placement Offer, and Internship Completion. The intended relationships connect applications to students and opportunities, interviews to the relevant candidate and recruitment activity, offers to a student and job application, and completion records to an internship application. The actual implementation of each lookup must be checked in the live form builder.

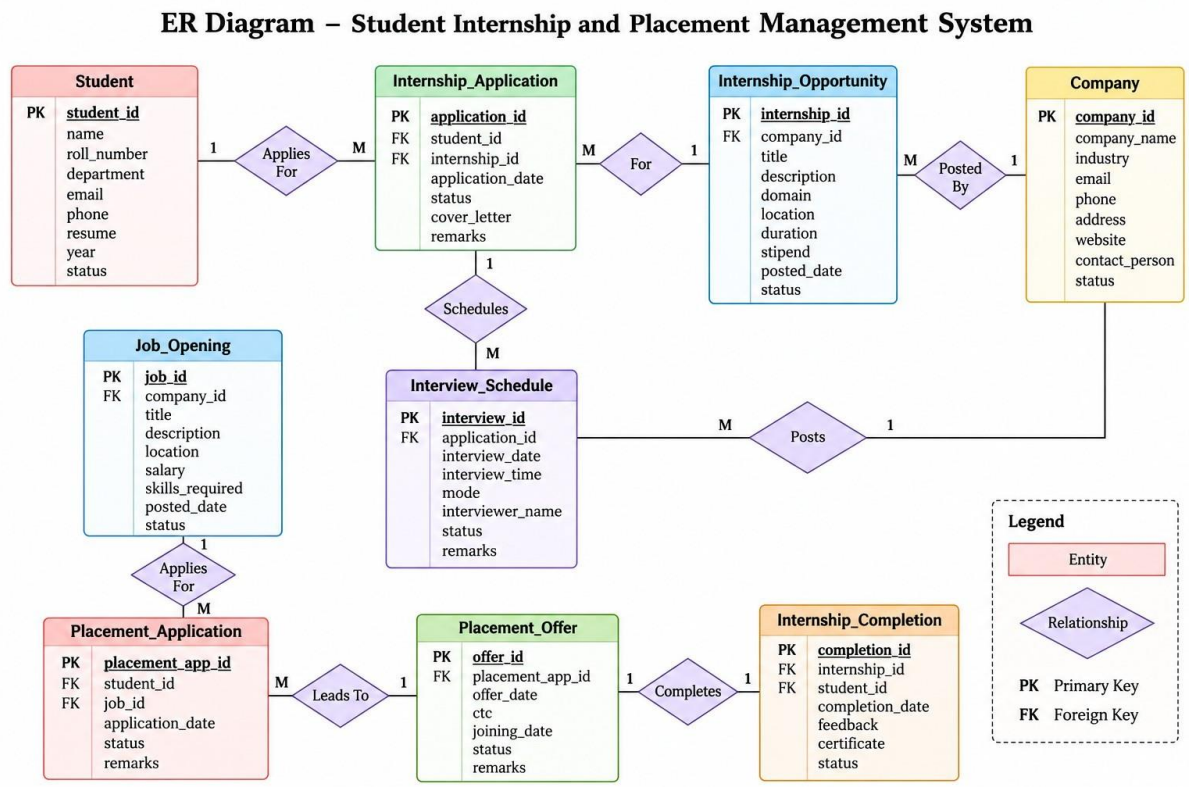

Figure 4.2: Entity–Relationship Diagram

Table 4.1: Entities and Relationships

Entity (Form)	Key Information	Related To	Relationship / Implementation
Student_Registration_Form	Student identity, academic and contact details	Applications, interviews, offers, completion	Lookup relationships where configured
Company_Registration_Form	Company identity and contact details	Internships, jobs, offers	Lookup relationships where configured
Internship_Opportunity_Form	Internship title, eligibility, dates and company	Internship applications	Company lookup reported in initial form
Job_Opening_Form	Job title, eligibility, deadline and company	Placement applications and offers	Lookup relationships where configured
Internship_Application_Form	Student, opportunity, date, resume, status	Student and internship opportunity	Lookup fields intended; verify live configuration
Placement_Application_Form	Student, job, date, resume, status	Student and job opening	Lookup fields intended; verify live configuration
Interview_Schedule_Form	Student, company, role, date/time, status, feedback	Application / candidate	Related application linkage may need manual configuration
Placement_Offer_Form	Student, company, position, salary, dates, status	Student and placement application	Related lookups intended; verify live configuration
Internship_Completion_Form	Student, application, dates, certificate, status	Student and internship application	Related lookups intended; verify live configuration

4.3

4.3Form Design

The application contains nine main forms. Auto Number fields provide identifiers where configured, dropdowns standardise statuses, file-upload fields support resumes or completion certificates, and multi-line fields capture remarks or feedback. The table below summarises the main form purposes; exact field link names, mandatory flags, and lookup targets should be taken from the live Creator configuration before final submission.

Table 4.2: Form Field Specification Summary

Form Name	Important Fields / Types	Validation or Default Status
Student_Registration_Form	Student identity and academic details; fields depend on live form	Student status workflow reportedly sets Active
Company_Registration_Form	Company name and contact details	Required fields and unique constraints to verify
Internship_Opportunity_Form	Company, internship details, dates and eligibility	Company lookup reported; deadline/status fields to verify
Job_Opening_Form	Company, job title, dates and eligibility	Open/closed status and deadline fields to verify
Internship_Application_Form	Auto Number, student, opportunity, date, resume, status, remarks	Status default Applied; duplicate/deadline validation reported
Placement_Application_Form	Auto Number, student, job, date, resume, status, remarks	Status default Applied; duplicate/deadline validation reported
Interview_Schedule_Form	Auto Number, student/company or application reference, date/time, mode, status, feedback	Status default Scheduled
Placement_Offer_Form	Auto Number, student, company, job application, position, salary, offer/joining dates, status	Status default Pending; salary validation reported
Internship_Completion_Form	Auto Number, student, application, start/end dates, certificate, feedback, status	Status default In Progress

The template asks for a field-by-field specification including field label, link name, field type, mandatory status, validation/default, and remarks. Since the live field link names and mandatory settings were not supplied in the conversation, they are not invented here. Before submission, add one detailed table per form using screenshots or exported field definitions from Zoho Creator.

4.4 Process and Workflow Design

The intended process is: register student and company; create internship/job opportunities; record applications; validate required information; schedule interviews; record placement offers; and record internship completion. Workflow triggers reported by Zia are primarily on record creation. Application and offer validation workflows were reported to include custom Deluge logic, but their source code and behaviour must be tested.

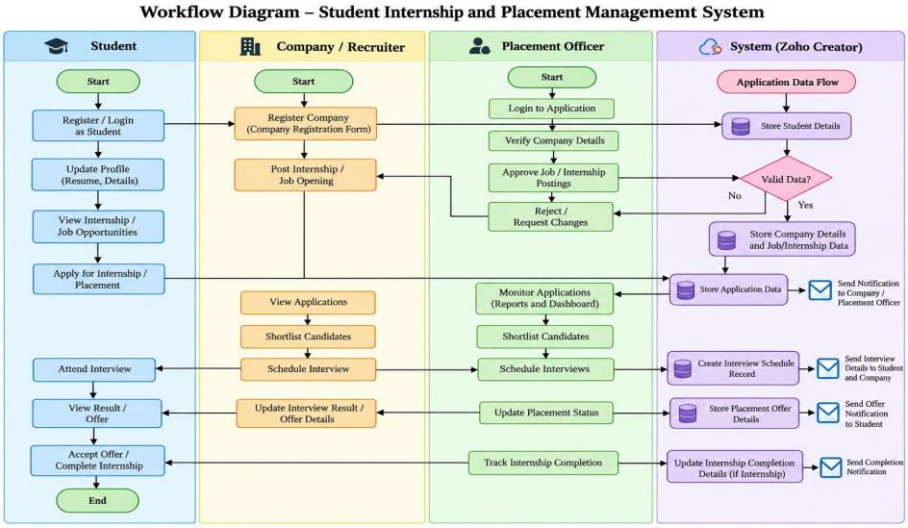

Figure 4.3: Workflow / Process Flow for Internship and Placement Management

4.5 User Interface and Navigation Design

The application menu is organised into Student Management, Company Management, Opportunity Management, Application Management, Interview Management, Placement Management, and Internship Completion. Reports are available from the menu, and the Student_Placement_Dashboard contains six summary cards and three pie charts.

Figure 4.4: Navigation Structure and Dashboard Wireframe

4.6 Access Control Design

A permission matrix is included as a design proposal. It does not claim that these roles have been configured in Zoho Creator. The live permissions and record-level restrictions must be reviewed before the system is used with real student information.

Table 4.3: Role–Permission Matrix (Proposed; verify implementation)

Component	Administrator	Placement Officer	Recruiter	Student
Student records	Add/Edit/View/ Delete	Add/Edit/View	Assigned records only if configured	Own record only if portal configured
Company and opportunity records	Full access	Add/Edit/View	View assigned opportunities if configured	View open opportunities if portal configured
Applications	Full access	Manage all	Assigned applications if configured	Own applications if portal configured
Interview records	Full access	Manage all	Assigned interviews if configured	Own interviews if portal configured
Placement	Full access	Manage all	View assigned	Own records if

offers / completion			records if configured	portal configured
Dashboard and reports	Full access	View relevant reports	Restricted reports if configured	Own status only if configured

CHAPTER 5
IMPLEMENTATION

5.1 Application Setup

The application was built in Zoho Creator with assistance from the Zia Build Agent. The builder was instructed to create the forms first, then reports, dashboard components, and workflows in separate stages to keep configuration manageable. The reported menu sections are Student Management, Company Management, Opportunity Management, Application Management, Interview Management, Placement Management, and Internship Completion.

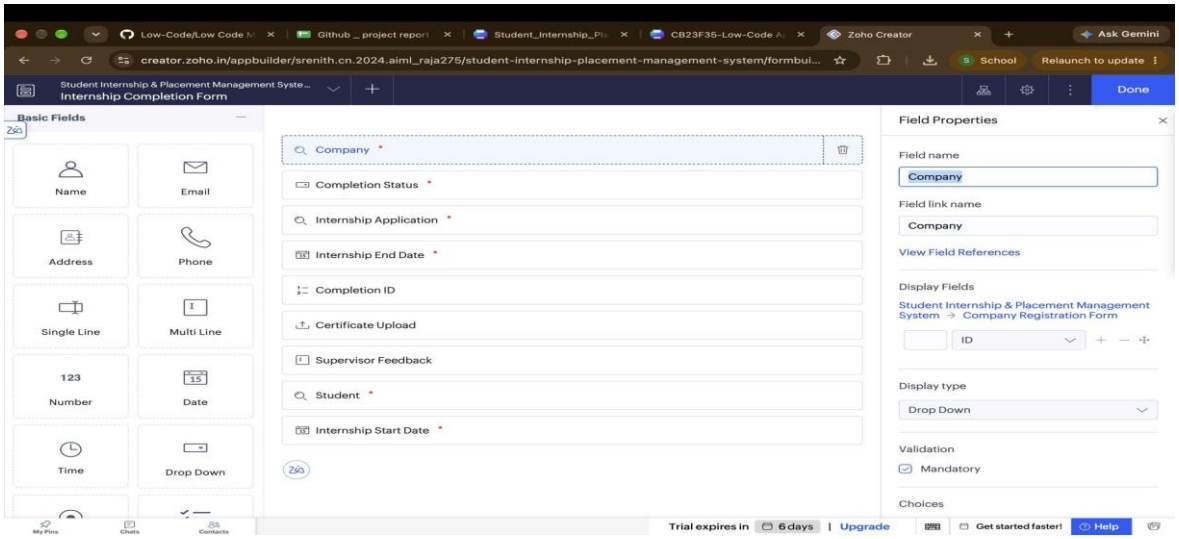

Figure 5.1: Application Home and Navigation Sections

5.2 Forms and Data Capture

Nine forms are reported as created:Student_Registration_Form, Company_Registration_Form,Internship_Opportunity_Form,Job_Opening_Form, Internship_Application_Form,Placement_Application_Form,Interview_Schedule_Form ,Placement_Offer_Form, and Internship_Completion_Form. They capture the main records required for the recruitment lifecycle. The forms include fields such as identifiers, names, dates, dropdown statuses, resumes, certificates, remarks, and interview feedback, as applicable to each form.

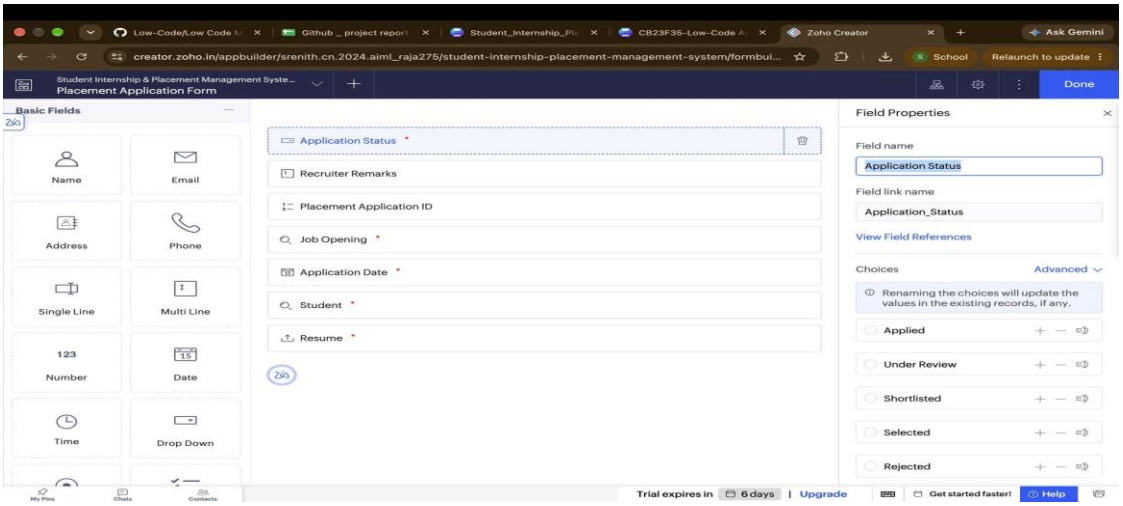

Figure 5.2: Form Builder Screenshot

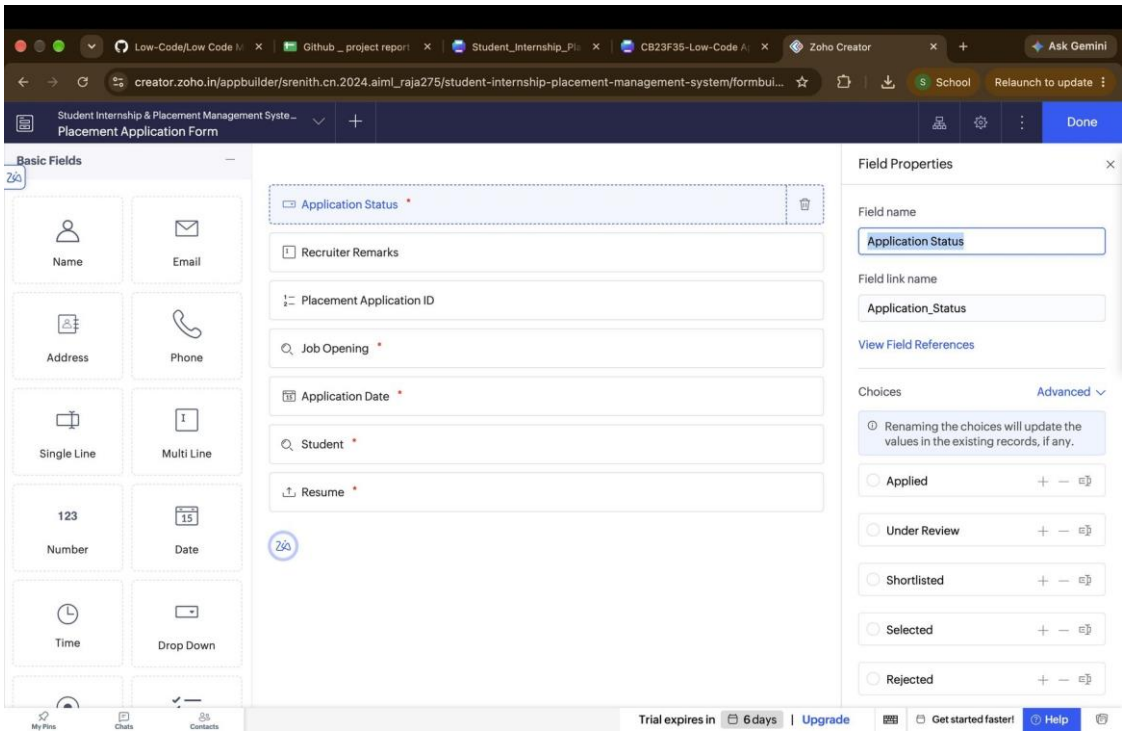

Figure 5.3: Live Form Screenshot

5.3 Reports

Nine reports were reported as created and added to the menu. The exact report names and report types should be checked in the live app; the names below reflect the confirmed report set from the build conversation.

Table 5.1: Reports Implemented

Report Name	Source Form	Purpose	Status
Student_List	Student_Registration_ Form	View registered students	Reported created; verify live
Company_List	Company_Registrati on_For m	View registered companies	Reported created; verify live
Internship_List	Internship_Opportun ity_For m	View internship opportuniti es	Reported created; verify live
Job_List	Job_Opening_Form	View job openings	Reported created; verify live
Internship_Applica tions	Internship_Applicati on_For m	Review internship applications and statuses	Reported created; verify live
Placement_Applic ations	Placement_Applicati on_For m	Review job applications and statuses	Reported created; verify live
Interview_List	Interview_Schedule_F orm	View interview schedules	Reported created; verify live
Placement_Offers	Placement_Offer_For m	Review offers, packages and statuses	Reported created; verify live
Internship_Comple tions	Internship_Completi on_For m	View completion records	Reported created; verify live

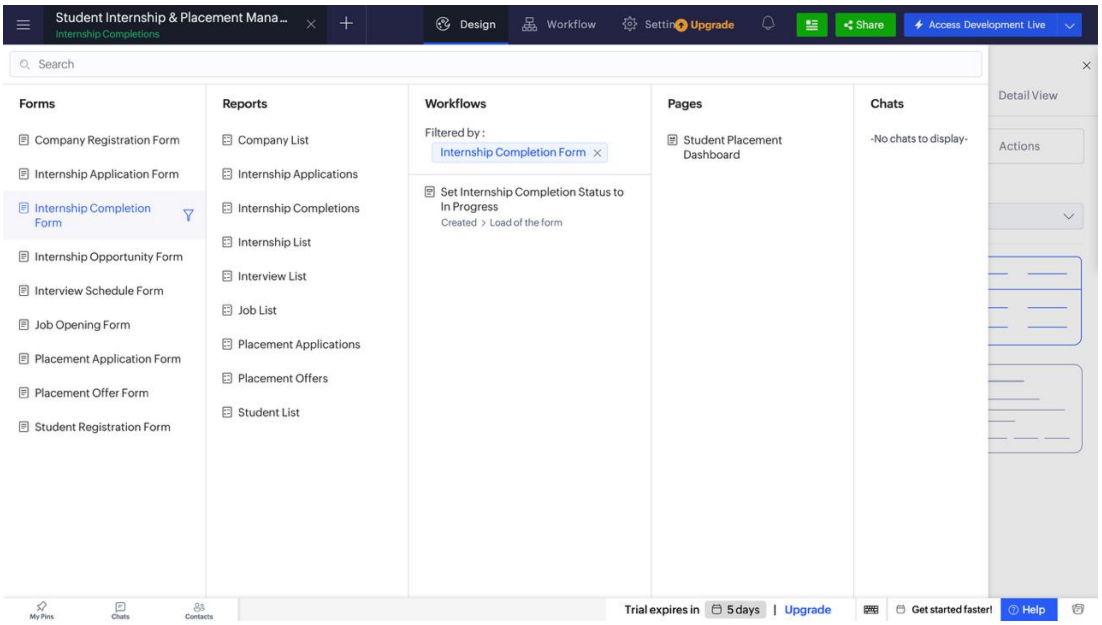

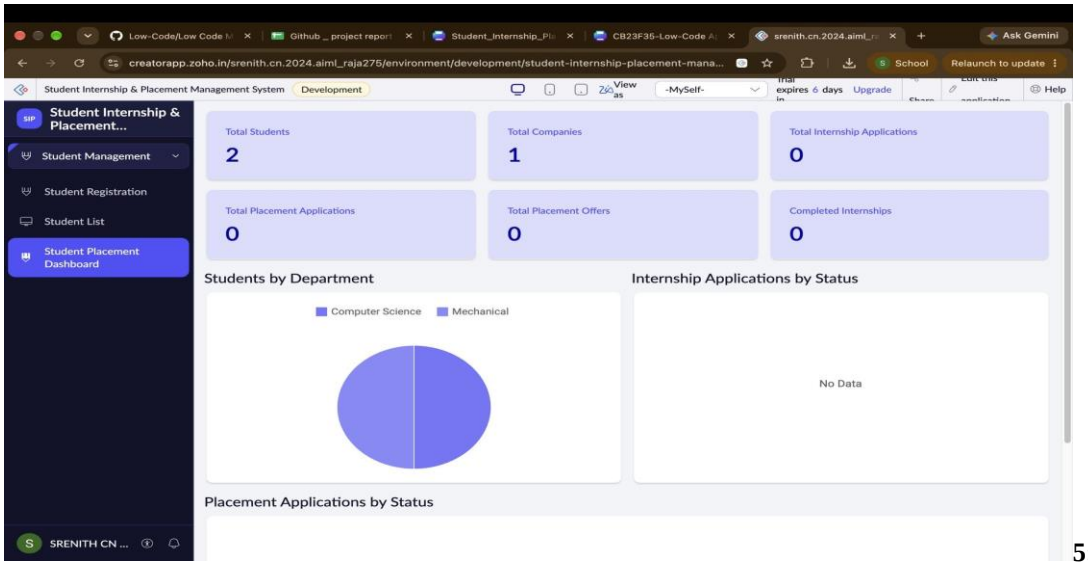

Figure 5.4: Report Screenshot

5.4 Pages and Dashboards

The Student_Placement_Dashboard was reported as created with six summary cards and three pie charts. The six cards are intended to show total students, total companies, internship applications, placement applications, placement offers, and completed internships. The three charts are intended to show students by department, internship applications by status, and placement applications by status. The values must be verified against actual saved records before claiming that they are correct.

5:

Figure 5.5 Student Placement Dashboard

5.5 Deluge Scripting

The Zia Build Agent reported adding Deluge logic to three validation workflows: Internship Application Validation, Placement Application Validation, and Placement Offer Validation. The actual source code was not provided in the conversation, so this report does not reproduce guessed scripts. Copy the complete scripts from the Zoho Creator workflow editor into Appendix C and verify their syntax and behaviour.

Table 5.2: Deluge Scripts Implemented

Script ID	Location / Trigger	Purpose	Deluge Concepts
DS-01	Internship Application Validation / form submission	Check required relationship fields, duplicates, and deadline where implemented	Conditions, record lookup, alert/cancel submit (verify exact code)
DS-02	Placement Application Validation / form submission	Check required relationship fields, duplicates, and deadline where implemented	Conditions, record lookup, alert/cancel submit (verify exact code)
DS-03	Placement Offer Validation / form submission	Check required offer fields and salary greater than zero	Conditions, validation message and submission cancellation (verify exact code)

Code 5.1 [validation script – placement offer]

```
if(input.Student.isNull()){
        alert "Student selection is required";
        cancel submit;
}
if(input.Company.isNull()){
        alert "Company selection is required";
        cancel submit;
}
if(input.Offered_Position.isBlank()){
        alert "Offered Position is required";
        cancel submit;
}
if(input.Joining_Date.isNull()){
        alert "Joining Date is required";
        cancel submit;
}
if(input.Annual_Salary_Package.isNull() ||
input.Annual_Salary_Package <= 0){
        alert "Enter a valid positive salary package";
        cancel submit;
}
```

Code 5.2 Internship application reminder

```
studentRecord = Student_Registration_Form[ID == input.Student];
internshipRecord = Internship_Opportunity_Form[ID ==
input.Internship_Opportunity];
studentName = studentRecord.Full_Name.first_name + " " +
studentRecord.Full_Name.last_name;
studentEmail = studentRecord.Email_Address;
internshipTitle = internshipRecord.Internship_Title;
sendmail[
        from : zoho.adminuserid
        to : studentEmail
        subject : "Internship Application Confirmation - " + internshipTitle
        message : "Dear " + studentName + ",<br><br>Your application for
<b>" + internshipTitle + "</b> was submitted
successfully.<br><br>Application Date: " + input.Application_Date +
"<br>Status: " + input.Application_Status + "<br><br>Best
regards,<br>Placement Team"
        content type : HTML]
```

Script 1 – Placement Offer Validation: The script validates the placement offer form by checking whether the student, company, offered position, joining date, and salary are provided. It also ensures that the annual salary package is greater than zero. If any field is missing or the salary is invalid, an alert is displayed and submission is cancelled. The result is that only valid placement offers can be submitted.

Script 2 – Internship Email Notification: The script retrieves the student's name and email address, along with the internship title, application date, and status. It then creates an email containing the application confirmation details and sends it to the student. The result is that the student receives an email confirming successful application submission, provided the workflow and email configuration work correctly.

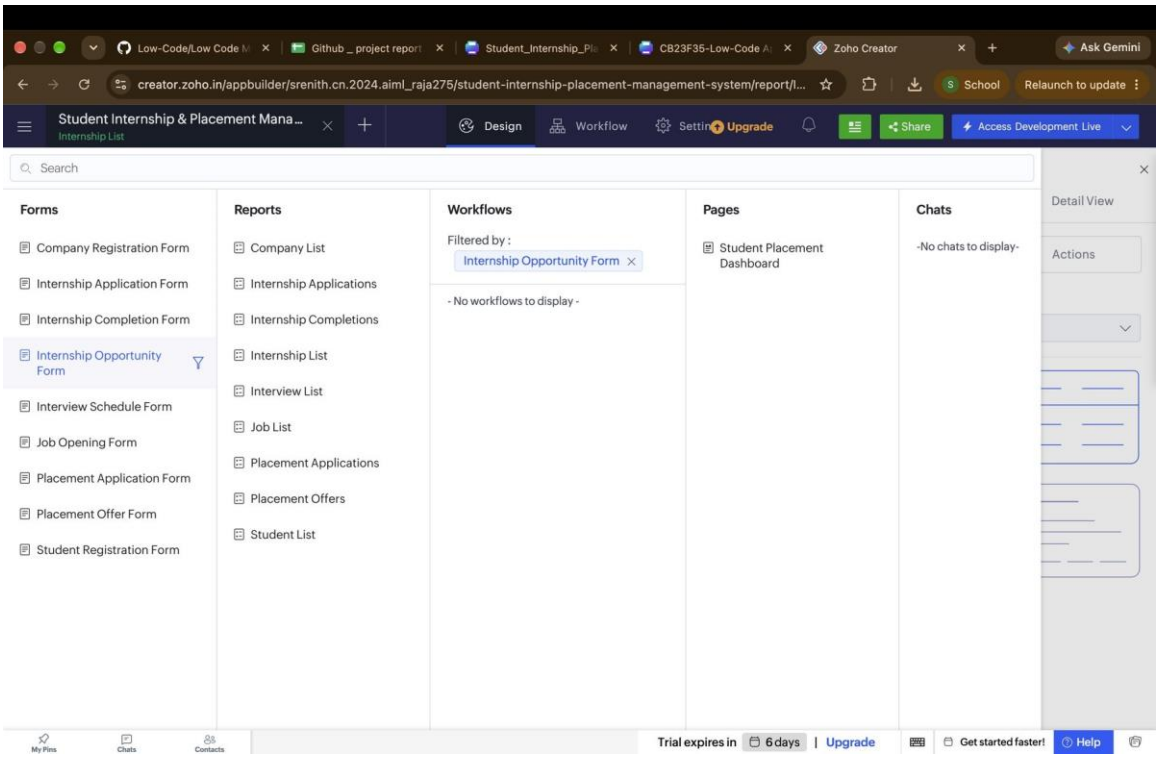

5.6 Workflows and Automation

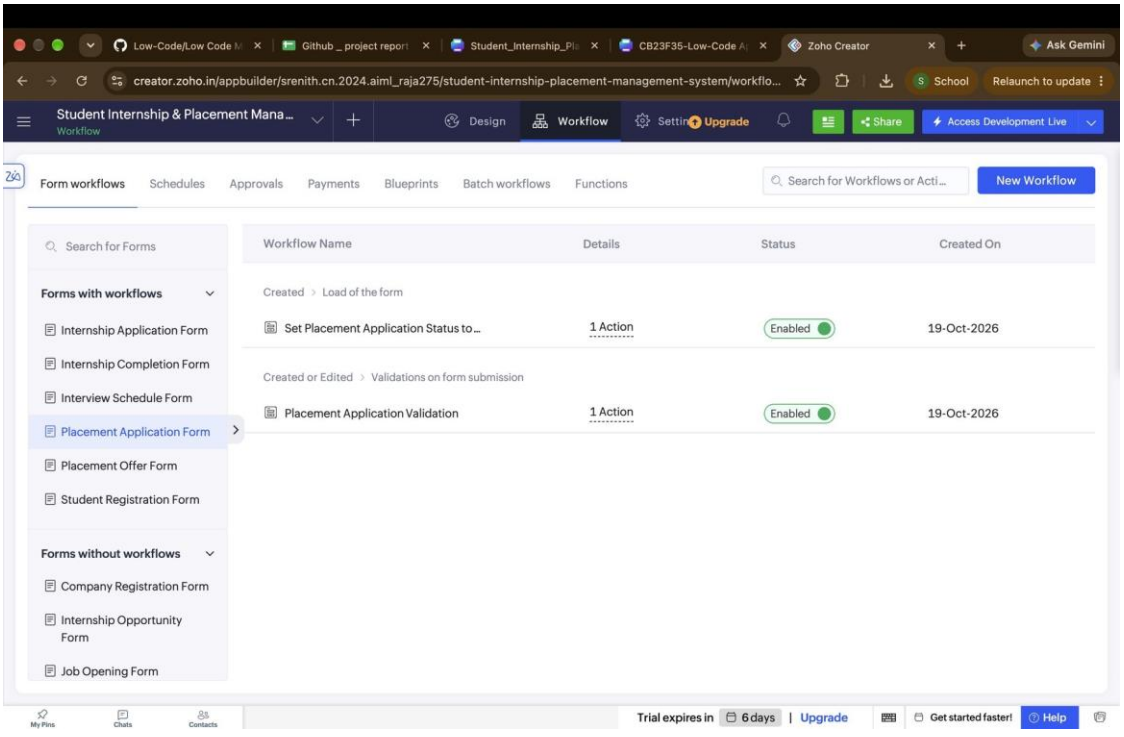

The build conversation reports that the following default-status workflows were created and enabled. Three additional validation workflows were reported as enabled, and custom Deluge logic was later reported as added to those validation workflows. The workflow list in Zoho Creator should be checked for the exact total and trigger/action details.

Table 5.3: Workflows Implemented

Workflow Name	Type	Trigger / Event	Action	Evidence Status
Set Student Status to Active	Form workflow	Student record creation	Set status to Active	Reported enabled; test with record
Set Internship Application Status to Applied	Form workflow	Internship application creation	Set status to Applied	Reported enabled; test with record
Set Placement Application Status to	Form workflow	Placement application creation	Set status to Applied	Reported enabled; test with record

Applied				
Set Interview Status to Scheduled	Form workflow	Interview creation	Set status to Scheduled; do not overwrite on edit as reported	Reported enabled; test with record
Set Placement Offer Status to Pending	Form workflow	Placement offer creation	Set status to Pending	Reported enabled; test with record
Set Internship Completion Status to In Progress	Form workflow	Completion record creation	Set status to In Progress; do not overwrite on edit as reported	Reported enabled; test with record
Internship Application Validation	Form workflow	Form submission	Validation logic reportedly added	Inspect code and test negative cases
Placement Application Validation	Form workflow	Form submission	Validation logic reportedly added	Inspect code and test negative cases
Placement Offer Validation	Form workflow	Form submission	Validation logic reportedly added	Inspect code and test negative cases

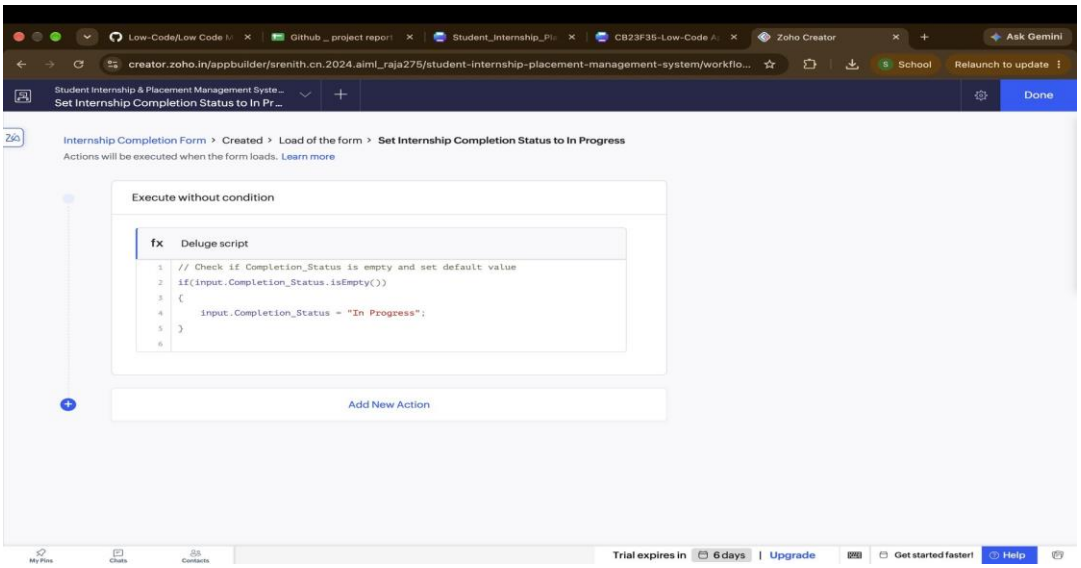

Figure 5.6: Workflow Configuration

5.7 Integrations

No connection to Zoho CRM, Zoho Mail, a third-party job board, or an external REST API was confirmed in the project build conversation. Therefore, the integration section is retained as required by the template, but no integration is claimed as implemented. An integration could be added in future using a configured connection and secure authentication, with testing evidence.

Table 5.4: Integrations Implemented

6 Integration	7 Service / Endpoint	8 Method	9 Authentication	10 Status
11 None confirmed	12 Not applicable	13 Not applicable	14 Not applicable	15 Not implemented / not verified

Code 5.3:[Integration script -Internship Application Confirmation]

```
studentRecord = Student_Registration_Form[ID == input.Student];
internshipRecord = Internship_Opportunity_Form[ID == input.Internship_Opportunity];
studentEmail = studentRecord.Email_Address;
internshipTitle = internshipRecord.Internship_Title;
sendmail[
    from : zoho.adminuserid
    to : studentEmail
    subject : "Internship Application Confirmation"
    message : "Your application for " + internshipTitle + " has been submitted successfully."];
```

Not evidenced

5.8 User Management and Role-Based Access

The intended stakeholders include an administrator, placement officer, recruiter, and student. However, the build conversation does not confirm that separate user roles, permission profiles, student portal access, or record-level restrictions were configured. This section is retained because the template requires it. Before claiming RBAC, configure the roles and test access using separate accounts.

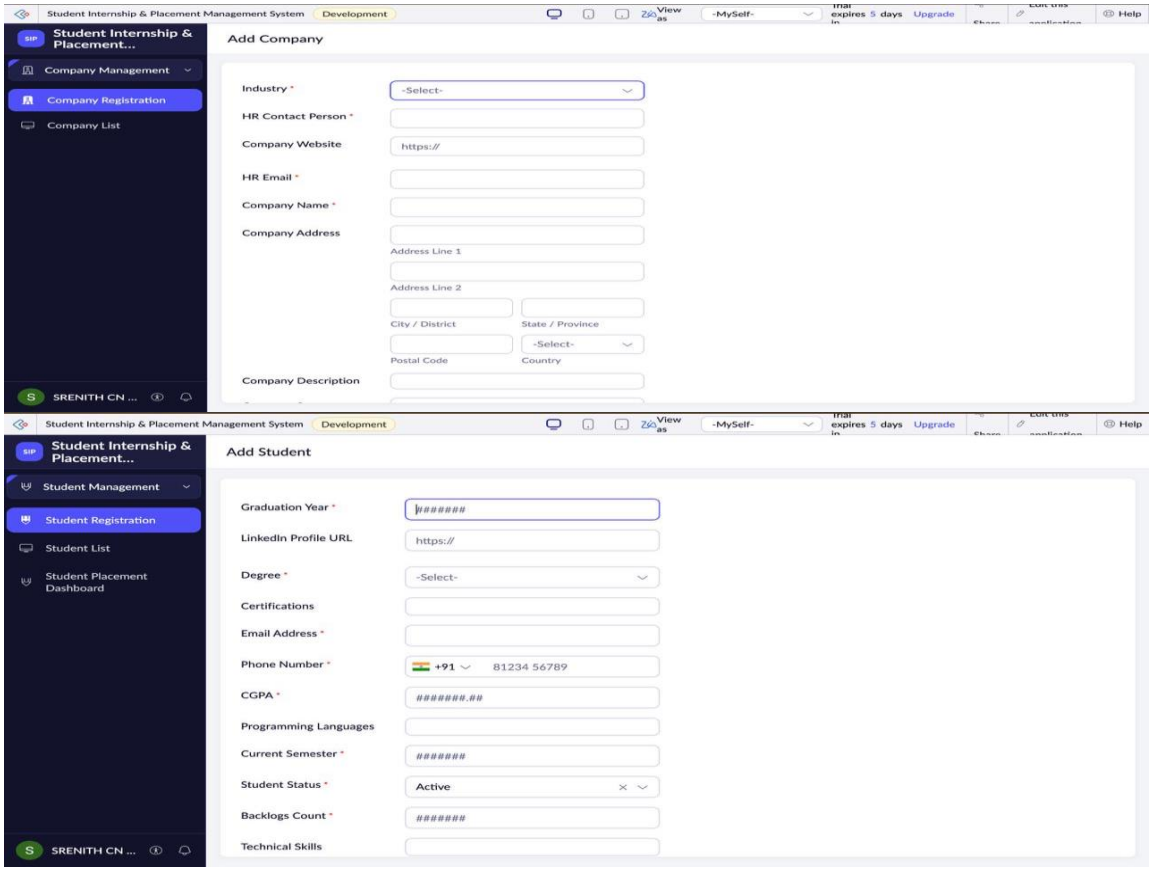

Figure 5.8:Student Role Form and Company Report

5.9 AI and Analytics Features

Zia Build Agent was used to assist with creating forms, reports, dashboard components, and workflows. The dashboard contains six summary cards and three pie charts as reported by Zia. AI assistance was used for application configuration; the business rules should be reviewed and tested by the developer. No predictive model, OCR, sentiment analysis, or external Zoho Analytics integration is confirmed.

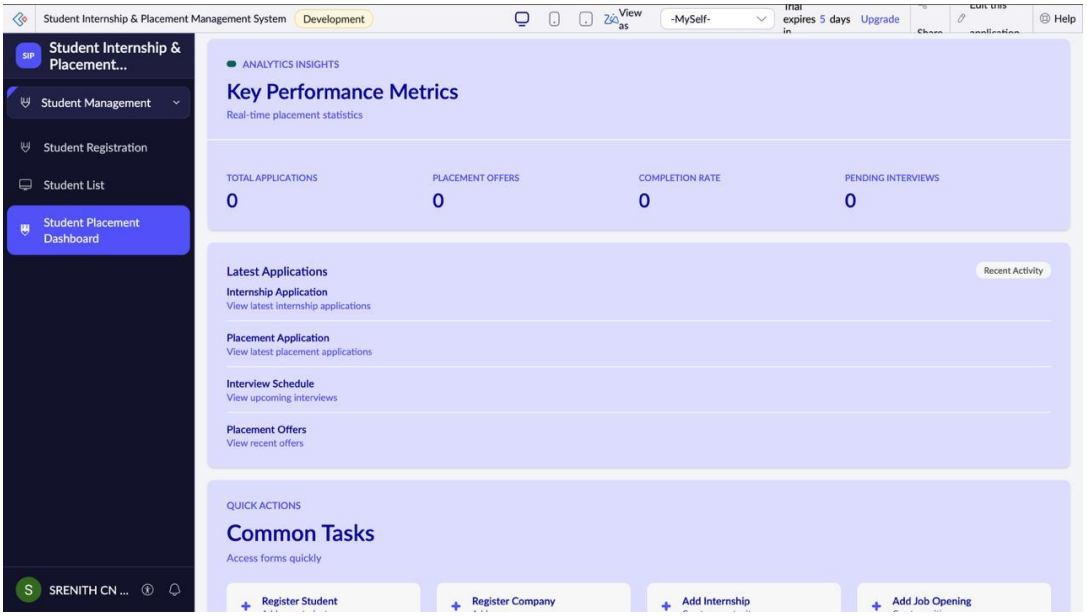

Figure 5.9: Zia / Analytics Feature in Use

5.10 Pro-Code Extension

A pro-code extension using Zoho Catalyst, custom JavaScript widgets, or a separate backend service was not used in the current project. The application requirements were addressed through Creator forms, reports, dashboard components, and workflows. A pro-code extension may be considered if future requirements demand complex matching algorithms, advanced analytics, external job-board synchronisation, or custom user experiences that exceed the platform's low-code capabilities.

5.11 Mobile and Portal Access

Mobile access and a student-facing portal were not confirmed in the current build. This section is retained to follow the template. If the application is accessed through the Zoho Creator mobile application or a configured portal, insert screenshots and describe the exact access settings. Otherwise, record the feature as not implemented.

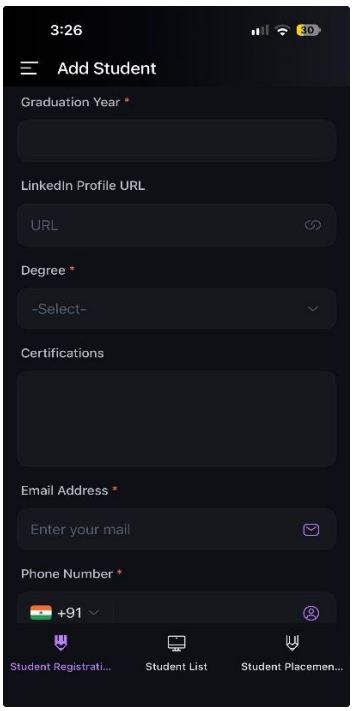

Figure 5.10: Mobile / Portal Access

CHAPTER 6
TESTING AND DEBUGGING

6.1 Testing Strategy

Testing should cover each form, each report, workflow triggers, validation failures, and dashboard calculations. Unit testing checks whether individual forms accept valid records and reject invalid ones. Integration testing checks whether saved records appear in the correct reports and whether dashboard counts change. Negative testing checks duplicate applications and invalid salary values. Role-based testing should be performed only after separate roles and permissions are configured.

At the time this report was prepared, Zia had reported that forms, reports, dashboard, and workflows were created. The conversation did not contain test execution evidence from real sample records. Therefore, the cases below are test plans; update Actual Result and Status after executing them.

6.2 Test Cases

Table 6.1: Test Cases

TC ID	FR Ref.	Test Description	Input / Steps	Expected Result	Actual Result	Status
TC-01	FR-01	Create student with required fields	Valid student details	Student record saved	Pending	Pending
TC-02	FR-01	Omit a mandatory student field	Leave required field blank	Validation message; record not saved	Pending	Pending
TC-03	FR-02	Create company record	Valid company details	Company record saved	Pending	Pending
TC-04	FR-03	Create internship opportunity	Valid opportunity and	Opportunity saved and listed	Pending	Pending

			company			
TC-05	FR-03	Create job opening	Valid job and company	Job saved and listed	Pending	Pending
TC-06	FR-04	Submit valid internship application	Existing student and internship	Application saved and status Applied	Pending	Pending
TC-07	FR-12	Submit duplicate internship application	Same student and opportunity twice	Second submission rejected if duplicate rule is implemented	Pending	Pending
TC-08	FR-12	Apply after internship deadline	Deadline in past, if field exists	Submission rejected if deadline rule is implemented	Pending	Pending
TC-09	FR-05	Submit valid placement application	Existing student and job	Application saved and status Applied	Pending	Pending
TC-10	FR-12	Submit duplicate placement application	Same student and job twice	Second submission rejected if duplicate rule is implemented	Pending	Pending
TC-11	FR-06	Create	Valid	Interview	Pending	Pending

		interview record	interview date/time	saved with Scheduled status		
TC-12	FR-07	Create placement offer with valid salary	Salary greater than zero	Offer saved with Pending status	Pending	Pending
TC-13	FR-12	Create placement offer with zero salary	Salary = 0	Submission rejected if validation is implemented	Pending	Pending
TC-14	FR-08	Create internship completion record	Valid student/application and dates	Completion saved with In Progress status	Pending	Pending
TC-15	FR-09	Open all reports	Saved sample records exist	Each report displays its matching records	Pending	Pending
TC-16	FR-10	Check dashboard summary cards	Known sample records exist	Counts match records in forms/reports	Pending	Pending
TC-17	FR-10	Check dashboard pie charts	Records have different statuses/departments	Slices reflect actual record counts	Pending	Pending

TC-18	NFR-04	Test unauthorised access	Use a non-admin test account if configured	Restricted data is inaccessible	Pending	Pending

6.3 Debugging Deluge Scripts

The validation workflows were reported as updated with Deluge logic. Debugging should include reviewing the exact code in the workflow editor, checking field link names and lookup criteria, using the platform's available error messages or logs, and submitting both valid and invalid records. One reported builder issue during development was a Zoho Creator builder error involving missing lookup metadata; the Zia agent attributed it to a possible builder metadata issue. It should be mentioned as a development observation only if it was actually encountered in this app, and any final fix should be documented from the live environment.

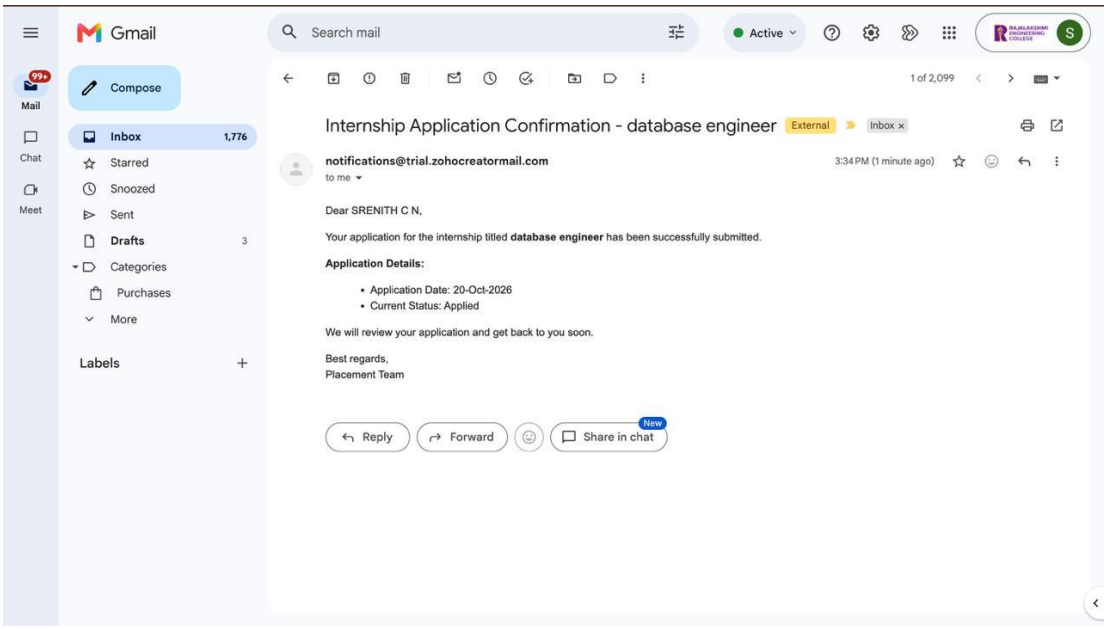

Figure 6.1: Deluge Debug Output/Log

6.4 Defect Log

Table 6.2: Defect Log

Bug ID	Description	Root Cause	Fix Applied	Status
BUG-01	Builder error reported in an earlier form-building stage: missing lookup reference metadata	Possible builder metadata/platform issue according to the builder assistant; root cause not confirmed	The forms were later reported as successfully created; exact repair steps not documented	Closed by continued build; verify no recurrence
BUG-02	Validation workflows require actual negative-case testing	No test evidence supplied yet	Run duplicate-application and zero-salary tests	Open / pending testing

6.5 User Acceptance Testing

The template requests feedback from at least two end users. No actual user feedback was supplied during preparation of this report. Complete the table after two users operate the application and provide genuine feedback.

Table 6.3: User Acceptance Feedback

User	Role Tested	Feedback	Action Taken
[User 1 name]	[Role]	[Record actual feedback after test]	[Action taken]
[User 2 name]	[Role]	[Record actual feedback after test]	[Action taken]

CHAPTER 7

DEPLOYMENT, SECURITY AND GOVERNANCE

7.1 Environments and Deployment Strategy

The application was configured in Zoho Creator. The conversation does not confirm that separate development, staging, and production environments were used or that the app was formally published to production. Before submission, confirm whether the app has a live URL and record the deployment date only if publication has occurred.

Table 7.1: Deployment Checklist

S.No.	Checklist Item	Status
1	Forms, reports and workflows reviewed in the build environment	Reported created; manual verification required
2	Sample/test data removed or clearly isolated	Pending
3	Roles and permissions configured and tested	Not recorded
4	Connections authorised in production	Not applicable / no integrations confirmed
5	Workflows saved and enabled	Reported enabled; test behaviour
6	Application published and URL verified	Not recorded
7	Version / release notes recorded	Pending

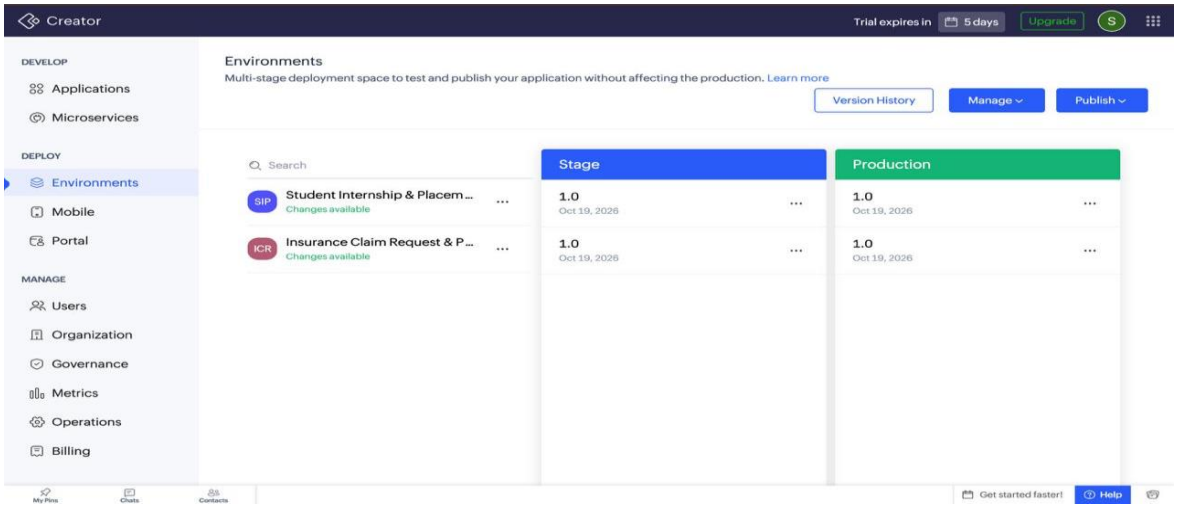

Figure 7.1: Environments / Publish to Production

7.2 Performance Optimisation

No measured performance benchmark was supplied. For a small student project, basic optimisation can include keeping reports focused on relevant fields, using appropriate filters, avoiding unnecessary repeated data lookups in custom Deluge code, and checking that dashboard cards use efficient data sources. Any claim of faster response time must be supported by before-and-after measurements.

Table 7.2: Performance Optimisation Results

Optimisation Applied	Component	Before	After	Improvement
Use only relevant report columns	Reports	Not measured	Not measured	Not quantified
Use filtered views for relevant records	Reports	Not measured	Not measured	Not quantified
Review lookup/query logic in Deluge	Validation workflows	Not measured	Not measured	Not quantified

7.3 Security Features

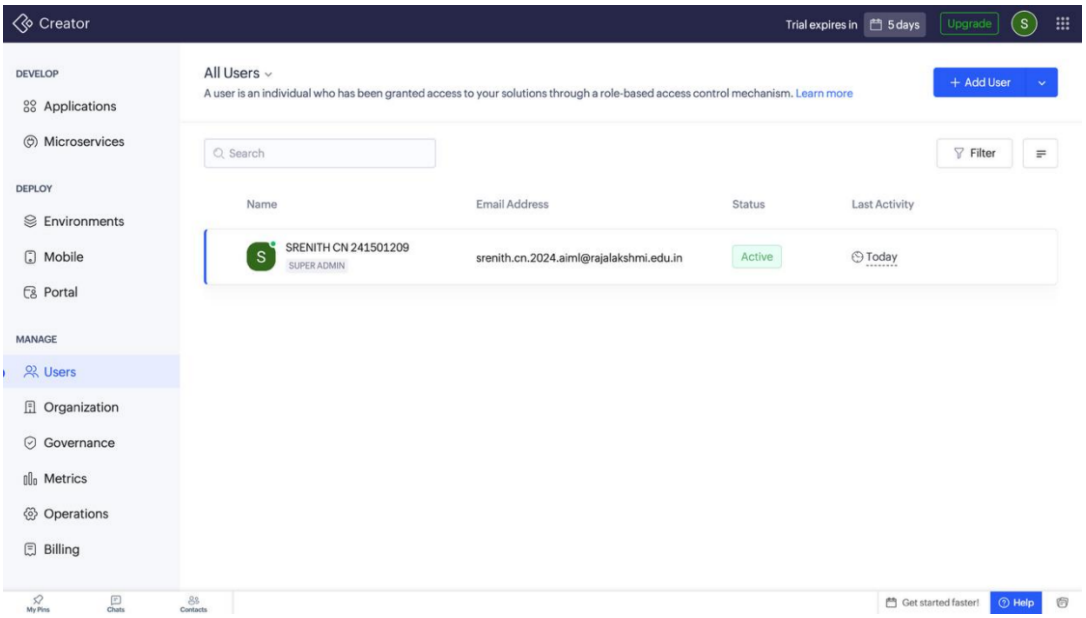

The application may contain personal and academic student data, so access should be limited to authorised users. Security must be verified through Creator permission settings and separate-account tests. Do not include demo passwords in the report. The current conversation did not confirm encryption settings, record-level criteria, two-factor authentication, or a student portal.

Table 7.3: Security Controls Implemented

Security Control	Where Applied	Threat Mitigated / Status
Required fields and validation	Forms / validation workflows	Reduces incomplete or invalid records; test actual behaviour
Role-based permissions	Creator permissions	Not recorded; configure and test before real use
Record-level restrictions	Reports / data access	Not recorded; required for private student records
Secure integration connections	Integrations	No external integration confirmed
Credentials management	Application administration	Never include passwords in reports; use approved account controls

7.4 Governance and Administration

Governance practices should include consistent form and workflow names, documenting changes, reviewing permissions, exporting or backing up data according to college requirements, and checking workflow logs after changes. The application owner should confirm which audit trail and backup capabilities are available under the current Creator edition.

` **Figure 7.2: Audit Trail / Administration Settings**

CHAPTER 8

RESULTS AND DISCUSSION

8.1 Application Output

The reported application output consists of nine forms, nine reports, a dashboard with six summary cards and three pie charts, and workflows for default statuses and validation. The end-to-end scenario below describes the intended demonstration path. Capture real screenshots and update the results after performing each step.

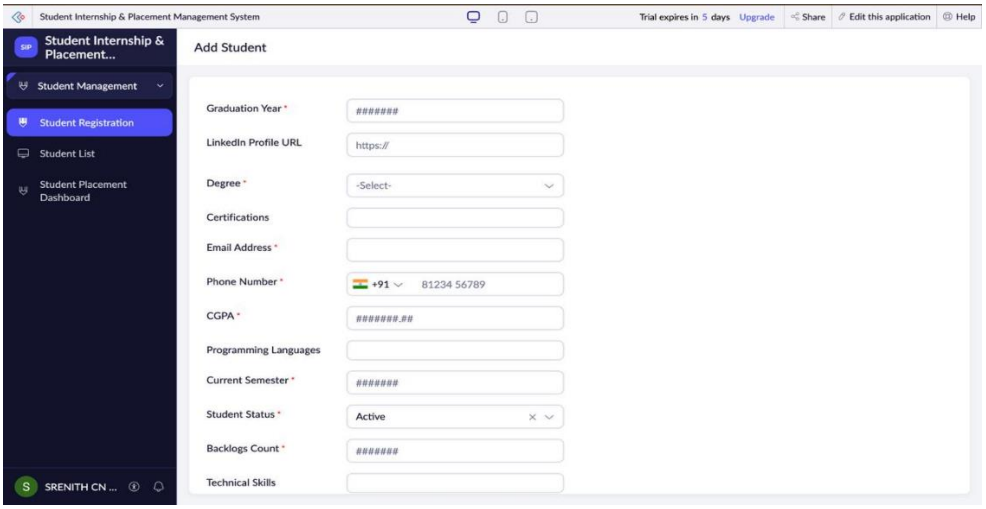

Figure 8.1: Scenario Step 1 – Student, company, internship and job records

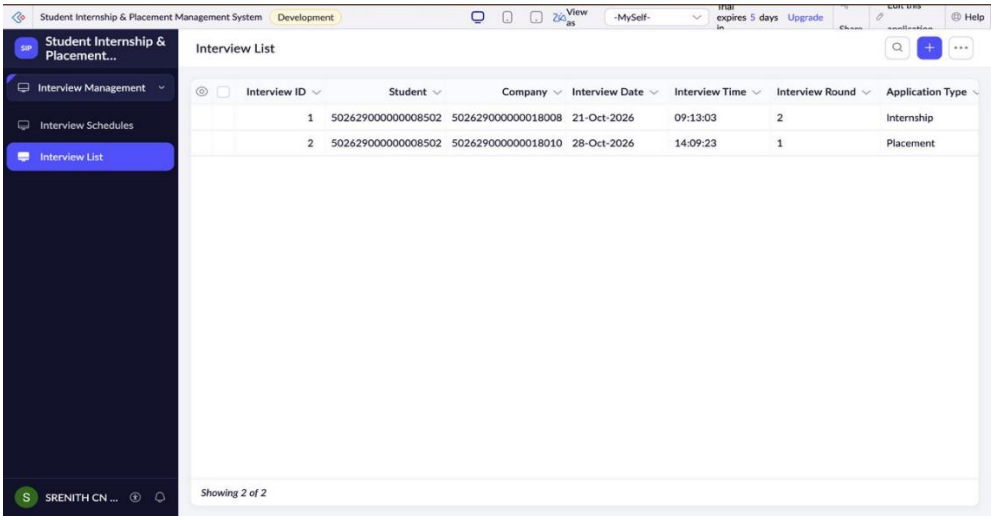

Figure 8.2: Scenario Step 2 – Application and interview records

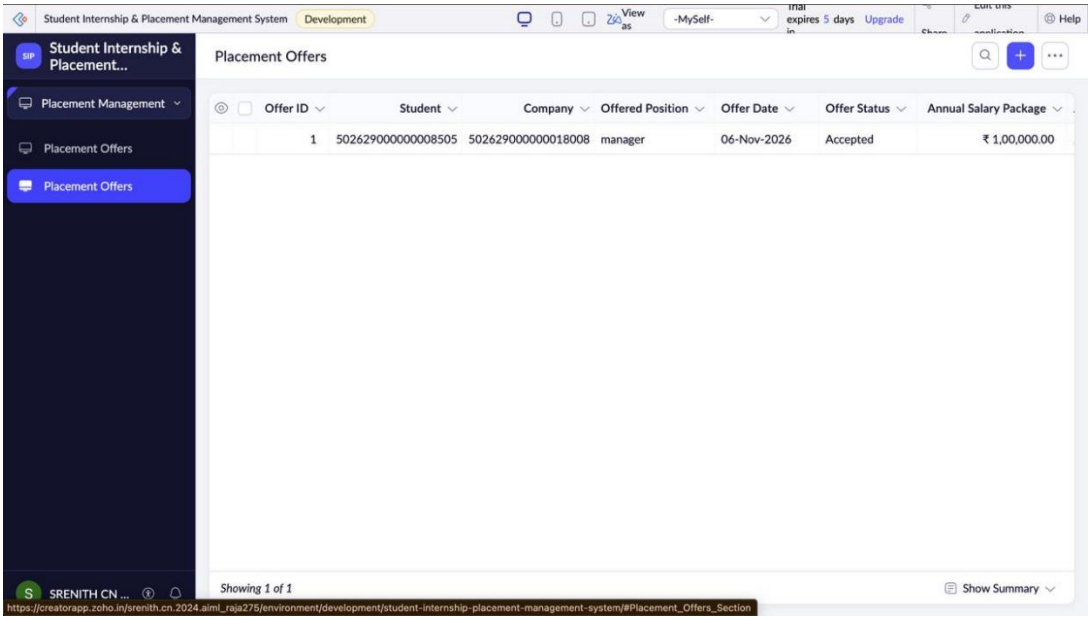

Figure 8.3: Scenario Step 3 – Offer/completion records and dashboard update

8.2 Achievement of Objectives

Table 8.1: Mapping of Objectives to Outcomes

Objective (Section 1.3)	Implemented Through	Outcome / Evidence
Create structured forms	Chapter 5.2	Nine forms reported created; confirm
		field definitions
Track applications	Chapter 5.2 and 5.3	Internship and placement application forms/reports reported created
Maintain interviews, offers and completion	Chapter 5.2 and 5.3	Forms and reports reported created
Provide reports	Chapter 5.3	Nine reports reported created; live report content must be checked
Provide dashboard	Chapter 5.4	Six cards and three pie charts reported created;

		verify against real records
Automate defaults and validations	Chapters 5.5 and 5.6	Workflows reported enabled; validation behaviour awaits negative-case tests

8.3 Comparison with the Existing System

Table 8.2: Existing System versus Proposed Application

Parameter	Existing / Manual Approach	Proposed Application	Improvement
Record storage	Separate files or informal records may be used	Central forms in one application	Centralisation intended; actual usage should be evaluated
Report generation	Manual filtering and consolidation	Reports are available in the app menu	Less manual navigation expected; not measured
Status tracking	Statuses updated in separate records or messages	Dropdown statuses and default workflows	More consistent status entry intended
Dashboard	Manual summaries may be required	Dashboard with cards and charts	Quick overview intended; accuracy needs testing
Data validation	Depends on manual checks	Validation workflows reportedly configured	Invalid submissions should be tested before claiming success

8.4 Limitations of the Low-Code Approach

The current build depends on Zoho Creator's field types, report capabilities, workflow triggers, and available scripting features. Complex matching algorithms, extensive integrations, custom interfaces, and advanced access rules may require additional Deluge logic or a pro-code extension. AI-assisted configuration can accelerate setup but may create inaccurate field references or incomplete logic, so generated workflows must be inspected. A further limitation is that performance, security, and outcome improvements have not yet been measured.

8.5 Reflection on the No-Code → Low-Code → Pro-Code Spectrum

Visual form creation, menu organisation, reports, and dashboard components are mainly no-code configuration. Workflow conditions and validation rules using Deluge are low-code. A separate recommendation engine, custom job-board connector, or specialised analytics service could require pro-code development. Moving to pro-code should be based on a real requirement that cannot be met efficiently within Creator, rather than adding complexity for its own sake.

CHAPTER 9

CONCLUSION AND FUTURE ENHANCEMENTS

9.1 Conclusion

The Student Internship and Placement Management System was configured in Zoho Creator to organise the main records involved in campus internship and placement activities. The reported build includes nine forms, nine reports, a dashboard with six summary cards and three pie charts, and workflows for setting default statuses and validating selected records. The application provides a structured starting point for centralising student, company, opportunity, application, interview, offer, and internship completion information.

The main remaining work is evidence-based verification. Real records should be entered, related records and report results checked, validation failures tested, and dashboard counts compared with the underlying data. Permissions, deployment, external integrations, and measured performance should only be reported as implemented after they have been configured and verified.

9.2 Future Enhancements

- Configure separate Administrator, Placement Officer, Recruiter, and Student access with record-level restrictions and test each role.
- Add email or in-app notifications for interview schedules, application decisions, and offer updates if supported by the selected Creator plan.
- Add scheduled reminders for application deadlines and upcoming interviews.
- Add a student portal for viewing open opportunities and personal application statuses.
- Integrate with a mail service or external job board using secure connections if required.
- Collect test metrics and user feedback, then use the results to improve form usability and report performance.
- Explore analytics or AI-assisted candidate matching only after data quality and governance are established.

9.3 Learning Outcomes and Career Relevance

This project provides practical experience with low-code application planning, form-based data capture, reports, dashboards, workflow configuration, and the need to verify AI-assisted output. It demonstrates how a citizen developer can deliver a useful prototype while recognising when custom scripting or pro-code development is necessary. These skills are relevant to low-code development, business process automation, solutions consulting, application administration, and software engineering roles.

APPENDIX A

ZOHO CREATOR FEATURE COVERAGE CHECKLIST

Table A.1: Feature Coverage Checklist

Unit	Feature	Done?	Where in Application	Report Section / Evidence
I	Application created and menu organised	Reported; verify	Student Internship & Placement Management System	**5.1 / Figure 5.1**
II	Forms with at least 8 distinct field types	Not verified	Nine forms	**5.2 / Figures 5.2–5.3**
II	Lookup relationships between forms	Partially reported	Internship opportunity company lookup; other lookups need inspection	**4.2, 5.2**
II	Subform (parent–child data)	Not recorded	None confirmed	**4.2**
II	Field validations	Reported; test	Application and offer validation workflows	**5.5, 5.6**
II	List reports with filters/grouping/custom actions	Reports reported; details unverified	Nine reports	**5.3 / Figure 5.4**
II	Kanban/Calendar/ Timeline/Map report	Not recorded	Inspect report types	**5.3**
II	Pivot table/chart report	Pie charts on dashboard reported; report type not confirmed	Dashboard	**5.4 / Figure 5.5**
II	Page/dashboard built with UI Builder	Reported created	Student_Placement_Dashboa rd	**5.4 / Figure 5.5**

II	Deluge form events / validation	Logic reported; source code to inspect	Three validation workflows	**5.5 / Appendix C**
II	Deluge functions, fetch, loops, collections	Not recorded	Inspect scripts	**5.5 / Appendix C**
II	Email/in-app notifications	Not recorded	None confirmed	**5.5–5.6**
II	Form workflows	Reported enabled	Default-status and validation workflows	**5.6 / Figure 5.6**
II	Scheduled workflow	Not recorded	None confirmed	**5.6**
II	Approval process	Not recorded	None confirmed	**5.6**
II	Blueprint	Not recorded	None confirmed	**5.6**
II	Batch/report workflow	Not recorded	None confirmed	**5.6**
II	Testing and debugging evidence	Pending	Test records/logs to be captured	Chapter 6
III	Zoho service integration	Not recorded	None confirmed	**5.7**
III	Connection/REST API call	Not recorded	None confirmed	**5.7**
III	Webhook or Creator REST API	Not recorded	None confirmed	**5.7**
III	Users, roles and permission profiles	Not recorded	Inspect app permissions	**5.8**
III	Record-level access criteria / portal	Not recorded	Inspect app permissions/portal	**5.8, 5.11**
III	Zia / AI feature	Used for assisted configuration per build conversation	Zia Build Agent	**5.9**
III	Analytics (charts / Zoho Analytics)	Dashboard charts reported; Zoho Analytics integration	Student_Placement_Dashboard	**5.4, 5.9**

		not confirmed		
IV	Performance optimisation applied and measured	Not measured	No benchmark supplied	**7.2**
IV	Deployment across environments	Not recorded	Inspect deployment settings	**7.1**
IV	Security controls (encryption, OAuth, permissions)	Not recorded	Inspect security settings	**7.3**
IV	Governance (audit trail, administration)	Not recorded	Inspect administration settings	**7.4**
V	Pro-code extension	Not implemented / not confirmed	None confirmed	**5.10**
V	Low-code limitations and spectrum analysis	Discussed	Chapter 8	**8.4, 8.5**
—	Mobile app / portal access	Not recorded	None confirmed	**5.11**

Total features implemented: do not calculate until each row is checked against the live application and supporting evidence.

APPENDIX B

COURSE OUTCOME MAPPING

Table B.1: Mapping of Course Outcomes to Report Chapters

CO	Course Outcome Statement	Evidence in Report	Self-Assessed Level (1–3)	Examiner Level
CO1	Explain principles, architecture and business value of low-code development using Zoho Creator.	Chapters 1 and 2	[Select after review]	
CO2	Develop business applications using Creator forms, reports, workflows and Deluge scripting.	Chapters 4, 5.1–5.6 and 6	[Select after review]	
CO3	Integrate Creator applications with Zoho services/external systems using APIs, connections and role-based security.	Sections 4.6, 5.7–5.9; integrations/RBAC not confirmed	[Select after review]	
CO4	Deploy, secure and manage applications across environments and	Chapter 7; deployment and security require verification	[Select after review]	

	governance practices.			
CO5	Evaluate low-code strategies, AI-assisted development and transition to pro-code.	Sections 5.9, 5.10, 8.4, 8.5 and 9.3	[Select after review]	

APPENDIX C

COMPLETE DELUGE SOURCE CODE

The live Deluge source code was not provided in the conversation. Do not submit invented or illustrative code as if it were deployed. Open each workflow in Zoho Creator, copy its complete script, and paste it into the corresponding section below using Courier New 10 pt.

C.1 Internship Application Validation

Purpose: Paste the complete script from the existing Internship Application Validation workflow.

```
// Paste verified source code here
// Include workflow name, form, trigger, and purpose.
```

C.2 Placement Application Validation

Purpose: Paste the complete script from the existing Placement Application Validation workflow.

```
// Paste verified source code here
// Include workflow name, form, trigger, and purpose.
```

C.3 Placement Offer Validation

Purpose: Paste the complete script from the existing Placement Offer Validation workflow.

```
// Paste verified source code here
// Include workflow name, form, trigger, and purpose.
```

C.4 Default Status Workflows

Purpose: Paste scripts or document configuration for student Active, internship Applied, placement Applied, interview Scheduled, offer Pending, and completion In Progress workflows, as applicable.

```
// Paste verified source code here
// Include workflow name, form, trigger, and purpose.
```

APPENDIX D

USER MANUAL

D.1 Accessing the Application

1. Open the Zoho Creator application URL provided by the application owner.
2. Sign in using your authorised Zoho account.
3. Open the Student Internship and Placement Management System from your applications.
4. Use the menu sections to open the required form, report, or dashboard.
5. Do not use another person's account or share passwords.

D.2 Instructions for Administrator / Placement Officer

6. Open Student Management and add or review student records.
7. Open Company Management and add or review company records.
8. Open Opportunity Management to add internships and job openings.
9. Open Application Management to review internship and placement applications.
10. Open Interview Management to record interview details and feedback.
11. Open Placement Management to record offers and their statuses.
12. Open Internship Completion to record start/end dates, feedback, and certificate uploads.
13. Open the relevant report to verify saved records.
14. Open Student_Placement_Dashboard to review summary cards and pie charts; compare values against actual reports during testing.

D.3 Instructions for Recruiter / Student

Recruiter and student-specific access has not been confirmed as configured. If separate roles or a portal are added, document the actual login path, permitted forms, record restrictions, and report access here. Until then, do not provide students or recruiters access to private records without verifying permissions.

APPENDIX E

EVALUATION RUBRIC (EXAMINER USE ONLY)

This appendix is retained from the prescribed template for examiner use. Students should not fill in marks awarded.

Table E.1: Evaluation Rubric for the Individual Project

S.No.	Criterion	Indicators	Max. Marks	Marks Awarded
1	Problem Definition & Requirement Analysis	Problem clarity, objectives, FR/NFR, use cases	10	
2	System Design	Architecture, data model, form specifications, workflow design, permissions	10	
3	Forms, Reports & Pages	Field types, lookups/subforms, reports and dashboard	15	
4	Deluge Scripting & Workflows	Correctness of scripts and workflow depth	15	
5	Integration, RBAC & AI	Integrations, permissions, AI/analytics	10	
6	Testing, Deployment, Security & Governance	Test coverage, environments, optimisation, security	10	
7	Live Demonstration	End-to-end operation and	15	

		feature checklist		
8	Project Report	Template adherence, format, figures, references	5	
9	Viva-Voce	Platform understanding and design decisions	10	
	TOTAL		100	

Table E.2: Performance Level Descriptors

Level	% of Maximum Marks	Descriptor
Excellent	90–100	Feature implemented completely and correctly; design choices explained confidently.
Good	70–89	Feature implemented with minor gaps; explanation adequate.
Satisfactory	50–69	Feature partly implemented or works only for the main path.
Needs Improvement	Below 50	Feature missing, non-functional or not understood.

Signature of Internal Examiner Signature of External Examiner
